B) 14.Ne3 A good square for the knight preventing ...♗g4. d5 Black has achieved his main aim and has a nice pawn centre. However this is where the real battle starts. 15.exd5 cxd5 16.g3! A good move restricting Black's knight on g6 while also securing White's king against attacks along the b8−h2 diagonal. True it also has a drawback of weakening the light squares but that's nothing Black can take advantage of at first sight. I had been analysing this exact position at my hotel room before the game and come to the conclusion that White had interesting chances to fight for an edge although theoreticaly Black should be just fine. b6 A logical move preparing the a8−h1 diagonal for the light squared bishop. 17.d4 White's main idea in the position. Now after ...e4 he can play his knight back to d2 preparing the c4−break. Bb7 Black keeps the centre dynamic hoping for an opening of

the long diagonal. 18.Bb2
So far I had evrything under control having played my moves quickly while my opponent had used a considerable amount of time. Qd7
A human move which I had not investigated during my preparation. *(*Instead the computer gave *18...e4 19.Nd2* which I was quite satisfied with. Having the pawn on e4 it's hard for Black to create anything really dangerous on the kingside. But White for his part can always open up with c4 at some point. *)*

B1) My first thought was to play 19.Rc1 which is also the computer's top suggestion. However I was not quite comfortable and thought that perhaps Black could get a quick attack on the kingside following Qh3!? Even with the computer by my side I'm far from convinced that the fearless 20.c4!
would lead to something good for White. To open the long diagonal towards White's king looks like a nightmare. When going down the lines a bit we end up in a critical position after *(20.Ng5 Qh6 21.dxe5)* The main continuation follows 20...exd4 21.Bxd4
(21.Ng5!? also deserves serious attention intending *Qh6 22.Nxf7* with great complications. *)*
21...Ng4 22.cxd5 Nh4! 23.Rc2!∞
An important defensive resource which is the only way of surviving for White. Although the computer engine keeps rather calm all the way down these lines even the smallest error could end up in disaster for White.;

B2) 19.Re2 Played after a long period of thought. The fact that Black's pawns were not static on d5 and e4 troubled me and I was slightly concerned about ...♕h3 ideas. 19...e4 This plays into White's hands, especially as now I knew exactly which plan to follow. *(*Instead *19...Qh3* was what I expected when White has to be careful. I had planned to continue *20.dxe5 Nxe5 21.Nxe5 Rxe5 22.Qf1 Qh5 23.Rae1* when White has driven away Black's queen and has things pretty much under control. *)* 20.Nd2 h5?!
This plan might look logical but in fact it only wastes time and in the end even helps White.
(20...Rad8 looks better to keep control in the centre and be ready for the c4−break. *)* 21.Qf1
A practical move but there might well have been better options. *(*The immediate *21.c4!?* is one interesting alternative. *)*
21...h4 22.c4 dxc4
This exchange gives White a very harmonious position. Perhaps Black should rather have allowed the advance c5 although that's not an easy decision to make. 23.Ndxc4 Nd5
*(*During the game I started to think about *23...Nh7* intending ...♘g5−f3. This would at least be slightly annoying for White but the central counterplay should prove stronger after *24.d5 Ng5 25.Rd1 Nf3+ 26.Kh1±*

since Black lacks the power to continue his attack. *)* 24.Rd1! Nicely preparing for ♘e5 which is now a major concern for Black. Qe7 25.Ne5 Rad8?! Black was in a difficult situation but this does not solve the issue. *(*The straightforward *25...Nxe3* looks best when after *26.fxe3 Bxe5 27.dxe5 Bc8* followed by ... ♗e6 Black is at least able to limit White's attacking chances. Still White has a solid plus following *28.Rd6 Be6 29.Bxe6 fxe6 30.Qg2±)* 26.Nxd5?! Not at all bad but there was better to be found. *(26.Nxg6! fxg6* would simply leave Black in very bad shape having a king without a real shelter, e.g. *27.Rc1 Kh7 28.Qh3+−; 26.Nc6!?* was another good way to a clear advantage following *Bxc6 27.bxc6±* with two potentially strong concted passed pawns as well as the pir of bishops. *)* 26...Bxd5 27.Bxd5 Rxd5 28.Rxe4± ½−½ (58) Berg,E (2575)−Howell, D (2693) Reykjavik 2015;

8.Nbxd2 d5 9.exd5 Nxd5 White's last move sacrifices a pawn and could rightly be called "original". But just as when we speak about the rightness of the surname Piano, everything is relative. For a player like Nakamura, who only ten years ago used to experiment with 2. ♕h5 in the open games, the whole line can safely be considered as "classical"!

10.Qb3 is only a repetition of moves. Black strives to keep more tension in the position.

B2b21) 23.Bh5?? If your engine is switched on, you will laugh at this, but during the game I wasn't 100% sure that I don't get mated here. My opponent also spent a lot of time, calculating the following variation: Qxh5 24.Nf6+ gxf6 25.Qh7+ Kf8 26.exf6 *(26.Qh8+ Ke7 27.Qxf6+ Ke8 28.e6 hxg5 29.Re1 Nc6 30.exf7+ Kf8−+)* 26...Qxg5 27.Qh8+ Qg8 28.Qxh6+ Ke8 29.Re1+ Kd7 30.Qh3+ Kc6 31.Qc3+ Kb6 32.Rb1+ Ka6−+ The king escapes!;

B2b22) 23.Nf3 Nc6 I was sure that it's necessary to bring the knight into play as soon as possible. The engine's preference 23...♖d5!? is something which I didn't even consider. 24.Bc4 *(24.Rc1 Nd4! 25.Nxd4 Rxd4 26.Qxb7 Qxe4 27.Qxe4 Rxe4 28.Bf3 f5! 29.exf6 Rae8 30.Bxe4 Rxe4 31.f3 Re6! 32.fxg7 a5 33.Rxc7 Ra6* This endgame will end in a draw, as White's rook will have to block the a−pawn and stay passive. *)* 24...Nd4 25.Nf6+ Now the exchange of queens is practically forced. Kh8□ 26.Qxg6 fxg6 27.Nd5 Black's three connected passed pawns could be a real force, but meanwhile White is in possession of an initiative. The e−pawn is strong. Not an easy decision. I decided not to swap knights, as I thought that White's back rank might become weak in some lines. This, indeed, became apparent later.

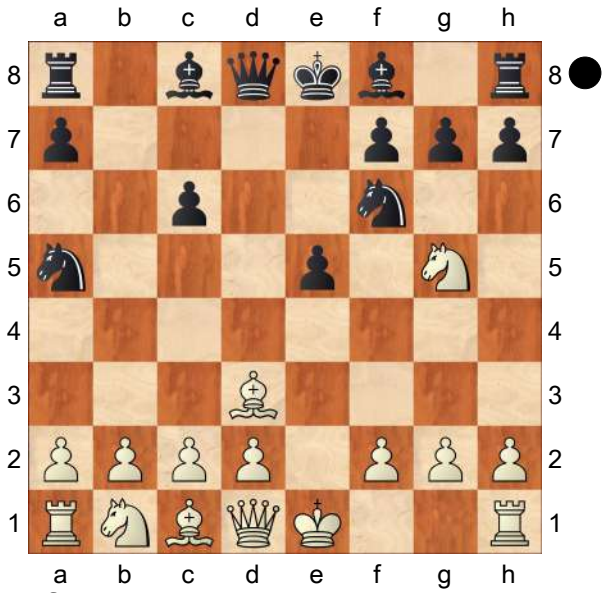
☐ **Beat the Retreat: Part 1,S**

■ **Two Knights Defense,8.Bd3 Misc**

Line 367 25.09.2014

[Vadim Zvjaginsev]

Current Reputation: White has the upper hand **1.e4 e5 2.Nf3 Nc6 3.Bc4 Nf6 4.Ng5 d5 5.exd5 Na5 6.Bb5+ c6 7.dxc6 bxc6 8.Bd3** This move is an ambitious response to Black's usual setup.



Many fine players have occasionally dabbled in the Two Knights Defense − it offers White a welcome repose from the uber−demanding Ruy Lopez. While 8. Be2 is still the overwhelming White's choice, 8. Bd3 has recently been gaining some popularity. Although it might seem "ugly" at first sight, there's more to this move than meets the eye. Let's start from the basic facts: White has already captured a pawn and Black knight on a5 is currently misplaced at the edge of the board; add Black's compromised queenside pawn structure and that's more than enough long term pluses to win a game. On the other hand, Black's main trumps are time and space, but one doesn't have to be a rocket scientist to understand that Black has to act quickly and get spatial advantage before White can capitalize on his material gain. In the main line with 8. Be2 Black usually gains his tempi by attacking White knight on g5 first with h6 and then with e4, which brings us to the principal idea behind 8. Bd3: White secures a safe retreat for his knight without time concessions. Moreover,

exchanges are in White's favor, so Black has to move his knight from f6 to avoid simplifications. Naturally, blocking the d−pawn is the most obvious minus of the bishop's retreat to d3: White will remain behind in development for some time, so keeping the position closed for a while is one of his priorities. This article had to be split into three parts: the first installment deals with Black's slightly inferior choices (8... Ng4, 8... Bd6, 8... h6 and 8... Be7) and none of them seems to guarantee a clear−cut path to equalizing. The second part will be dealing with 8... Bc5 (it appears to be an interesting option) and the third is devoted exclusively to 8... Nd5, which is probably the most promising move for Black. **8...Ng4** [Chapter]

23...Rf8 24.d3 Nb7 (Key game M. Molner − E. Sevillano, Los Angeles 2012) Suggested improvement for White: **25.g4!** (aimed against Bh3) **25...Rf7 26.Be2 Nd8 27.Bb2 Rb7 28.Bc1±** Best Mutual Play It is obvious that there are many computer games in the analyzed lines, which probably means that move 8. Bd3 has a solid reputation in many engine opening books. None of the four Black's eighth moves examined here seems good enough to promise equality in the opening phase: White is well−prepared for 8... h6, while both 8... Bd6 and 8.. . Be7 are probably too slow; 8... Ng4 is most likely the best among the four choices presented in this installment, yet both 9. Nh3 (leading to complicated middlegame play with slight edge for White) and 9. Ne4 (the best mutual play in this line leads straight to endgame, which appears to be a one−sided affair where White has a draw in his pocket at all times and Black has to play with great accuracy to avoid problems) seem to contain enough venom. All things considered, White can be quite content with current developments in these lines, while Black should probably be better off seeking counterplay either with 8... Bc5 or 8... Nd5, so check out the remaining two parts for a more complete understanding of 8. Bd3.

Nh5 28.b4 Nf4 The knight is well placed on f4 but later on it becomes the sole reason why Black's position goes downhill. It comes in the way of other pieces. 29.bxa5 bxa5 30.Reb1 Rf8 31.Bb5 Bc8 32.Bf1 f5 It is an interesting position with White playing on the queenside and Black on the other wing. But soon Topalov goes wrong. 33.c4 Ref7 34.Ra3 fxe4 35.Nxe4 Bf5 36.Rab3 '⩲' Caruana,F (2794)−Topalov,V (2780) Moscow 2016 As previously pointed out the knight on f4 really stops Black from getting his required counterplay. Bg6 37.Rb6 Qe7? *(37...Bxe4* was necessary and although White is clearly better, Black doesn't lose material. Instead Topalov hallucinated and committed a blunder. *)* 38.Nxd6 White has simply won material and stands just better. Nxh3+ 39.Qxh3 True the rook on b1 is hanging but so is the guy on f7. So it just a complete piece up position. Rf6 40.Nc8! Qd8 41.R1b5? An error on the 41st move. Very surprising. *(41.Rxf6 Qxf6 42.Rb2* is just curtains. White is a piece up and there is nothing more to play for as *Bf5* fails to *43.Qxf5+−)* 41...Rxf2 Now it gets a little complicated. 42.Rxg6 Rxf1+ 43.Kh2 Qxc8 44.Qxc8 *(44.Qxh6* would have still given White excellent winning chances. *)* 44...Rxc8 45.Rc6 *(45.Rb7 Rf7 46.Rc6!?* was an option.

45...Re8 The two black rooks combined with the e−pawn give Black enough counterplay to hold a draw.

Quite a heartbreak for Caruana who could have been on 2.5/4 with this win.;
B2a2) 16...Be6 17.Bc2 with d4 coming, although it is naturally not much.;

B2b) 14...Be6 15.Bxe6 Rxe6 16.Ne3 Nc8 *(16...Nc6 17.Qb3* with ♘d5 looming, is a little uncomfortable. *)* 17.Nf5 Ne7 18.d4 *(18.N3h4* is pointless, as without the dark−squared bishops I cannot make use of the knight on f5. *)* 18...exd4 19.N3xd4

B2b1) 19...Rxe4 '!' 20.Rxe4 Nxe4 21.Qg4 At first seemed to me quite promising for White, as I somehow only considered ♘xf5 here Ng5!
I discovered that this was possible only after I played 17.♘f5 *(21...Nxf5 22.Nxf5 Ng5 23.Re1!* is what I liked for White; h4 is now a serious threat and after *Qf6 24.Ne7+ Kh8 25.Nd5 Qd8 26.Qf5! Qc8 27.Qxc8+ Rxc8 28.Re7*

B2b2) 19...Re5 '?' 20.Ng3 Ng6 21.Qc2 *(21.c4*
I finally decided against it because of *c6* with ...♕b6 coming, even after *22.Ndf5 Qb6* and ...♖d8 follows after either capture. *)* 21...c6 22.Rad1

B2b21) 22...d5 does not quite work 23.Nf3 Re8 24.exd5 Rxe1+ 25.Nxe1 cxd5 *(25...Nxd5 26.c4)* 26.Nf3 is comfortably better for White. Normally it would not be much, but the inclusion of a4 a5 helps me enormously, as there will be a square on b5 and additional targets.;
B2b22) 22...Qc7 23.Ndf5±

B2b221) 23...d5 24.exd5 Nxd5 *(24...cxd5* is better, but again by no means equal *)* 25.Nh5 is not difficult, but it was somehow

aesthetically pleasing during the game. g7 cannot be defended. Rae8

B2b2211) 26.Rxe5 Qxe5 27.Qb1! is also possible *(27.g3 Qe2)*;

B2b2212) 26.Rf1 Re2 27.Qb1 and Black's temporary activity is extinguished, while g7 falls.;

B2b222) 23...Rd8 24.Qd2 Going c4 was also possible, with a nice grip on the position, but I was excited about the prospect of attacking d6 and threatening f4 with one move. For more details see the notes to this game by Carlsen in CBM 171.

B2b2221) 24...Qb6 25.Kh1 does not seem to change much. *(25.Nxd6 Re6* is much too hasty *)*;

B2b2222) 24...Kh7 Played after 18 minutes of thinking, a sure sign that he realised that his position was getting really unpleasant. 25.f4 Qb6+ Normally one would like to save such a check for later, but here it is absolutely forced. *(25...Ree8 26.Nxd6 Qb6+ 27.Qf2* Now I can safely block the check, since the rook on e8 is hanging. *)* 26.Kh1 *(26.Qf2* Now f4 is simply hanging: *Qxf2+ 27.Kxf2 Nxf4)*

B2b22221) 26...Re6 27.e5 is absolutely terrible for Black, as long as I avoid a nasty little trick Ng4 28.Rf1! I was going to play this on general grounds, as one should not take the rook off the last rank for no reason! *(28.Re2?? Nxf4! 29.Qxf4 dxe5* This is the point; because of the last rank weakness the tables are turned. *)*;

B2b22222) 26...Ree8

temporarily a pawn up as both f4 and b2 are hanging.;
B2b222222) 27.h3
By far the best move, but again I invested a large part of the time I had left.
B2b2222221)
27...h5 is what I spent all my time calculating before I played h3 and would have been a very interesting try. I investigated several options:
B2b22222211)
28.Qc2 or ♕d3 were other moves that I briefly touched on, with the idea of answering h4 with 29.Nxh4 Nxh4 30.e5+ But if he simply defends the pawn with ...♕c7 or ...♕c5 instead, I was not convinced about my advantage;
B2b22222212)
28.Nxd6
This is the simplest. After the forced h4 29.Ngf5 Nxe4 I saw 30.Nxe4! Rxe4! but I could not evaluate *(30...Rxd2 31.Ng5+* mates: *Kg8 32.Rxe8+ Nf8 33.Ne7+ Kh8 34.Rxf8#)* 31.Rxe4 Rxd2 32.Rxd2 properly. With more time I would surely have realised that all the entry points for his queen are covered and my threat of ♘d6 is very strong, but with little time and a possibly unsafe king, I'm always a bit wary of playing against the queen.;
B2b22222213)
28.Qe2!
The surprising move is the one I liked the most during the game;
B2b2222222)
27...Rd7
This came as a major surprise to me. Black cannot defend d6 as both ...d5 and ...♖e6 run into e5, but while maybe not objectively better, 28.Nxd6 Rxd6
The only chance: *(28...Red8 29.e5 Ne8 30.Ngf5* is just a pawn. *)* 29.Qxd6±

B2) 13...dxe5?! 14.Ncxe5 Nxe5 15.Nxe5 Re8 16.Qxd8 Raxd8 17.Bc2± White is a pawn up, but Black is completely developed. The next few moves are crucial for the evaluation of the position. g5 18.Nf3 g4 Let's pause for a minute and look carefully at this position. White is a pawn up here. What he would really like to do is take the pawn on g4 with h3. However, for that you must look deeper. Anand chose ♘d4. But we must analyse what happens after hxg4.

B2a) 19.hxg4 Nxg4 20.Nd4 It is at this point you must look at your opponent's best possibility. *(20.Re2* is already bad because of *Bc4!∓)* 20...Rxd4! Anand saw this move for his opponent. This is nothing for White. *)* 22...Bc4 23.Rd2 The rook attacks the bishop. And if it moves back, White can unravel with b3−♗b2. Hence, c5 is forced. c5 It is after reaching this position in his head and analysing the possibilities that Anand started to feel uncomfortable. He saw that the bishops are just excellently placed in the centre and with ...f5 coming up, he will lose a pawn and be in trouble. But he had a nice move which was missed. 24.Rb1! Giving up the a2 pawn. This is not an easy move to foresee. The threat is now b3. *(24.Rxd4* is a move that I like as well. *cxd4 25.Bd2±* White should be better here. Enough for victory? Maybe not. But in general he is better and quite substantially. *d3 26.Bd1±)* 24...Bxa2 25.Ra1 Bc4 26.Rxa7 The rook has activated itself, the b−pawn is free to move and it would be fine to end your calculations at this point and go for the

B) 11...Bg4 A logical innovation − the pin of ♘f3 causes White definite problems.

B1) It looks like the energetical 12.h3 Bh5 13.Bg5! '±!' Roiz '±!' would pose Black some problems: Be7 *(13...Qd6 14.Nbd2! Qxd3 15.Nxe5 Nxe5 16.Qxh5±)* 14.Bxe7 Qxe7 15.Re1 Qd6 16.Nbd2 Qxd3;

B2b) 15.g4 Quite a risky continuation, but it was hard to do with a pin of ♘f3 any longer. 15...Bg6 16.Nbd2 Be7! An excellent prophylactic move. B2b221) At the same time, another tactical resourse 23.Bh6! '↑!' For more details see the notes to this game in CBM 174 by Roiz. 1.e4 e5 2.Nf3 Nc6 3.Bc4 Bc5 4.b4 Bxb4 5.c3 Bd6 6.0−0 Qf6 Black has fortified his central outpost, his e5 strong point, and will bring out the King's Knight next turn. He stands ready to to repel any siege! **7.d4 Nge7 8.Bg5 Qg6 9.Bh4** A crafty move. Having loosened Black's control of e5, the Bishop aims to cycle around to g3 and add pressure to that square. For now, it maintains control of the h4−d8 diagonal. The downside for White is that the Bishop may become stranded on the Kingside. **9...b6**

[Castling 9...0−0 will transpose to lesson 9 [/variation/13862301#/11/b] after 10.dxe5 Bc5 11.Nbd2 b6 , etc.]

10.Nbd2 Bb7

[Normal development, though 10...Qh5 first appears more flexible.

See the first four lessons.]

11.Bd3 exd4

[11...Qh5 is played in lesson 7 [/variation/13862277/#/11/b] and lesson 8 [/variation/13862300/#/11/b]. Here Black completes his fianchetto and captures in the center, a plan that does seem workable. White gets compensation, of course, and Black may find a simpler life in ...Qg6−h5 on the 10th or 11th move.]

A good response by Karjakin. Noting the slight fragility in White's position, he prepares to play actively in the centre himself. 12.h3 It's unfortunate that White has to play another non−developing move, but *(12.Nf1* is strongly met by *Bg4* White has not achieved any advantage from the opening. *)* 12...exd4?! [8...a6 − 7.a4]

9.b5 Ne7 − 7.0−0 Here finally my opponent stopped blitzing and started to think. **10.Bg5**

[≤10.Be3 exchanges the dark−squared bishops, but looks rather harmless. This is slightly inaccurate. Now Black has number of ways to react and all of them looked decent. c6 There were other ways also but I felt this move simply ruins White's idea and makes the e3−bishop a bit aimless. *(10...Bxe3 11.fxe3 Ng6* '=' − 7.a4*; 10...Ng6 11.Nbd2 d5 12.Bxb6 cxb6 13.exd5 Nxd5 14.Re1 Ndf4 15.Re3 Bf5* Black has very active pieces fully compensating the defects in the ♙ structure. *16.Nf1 Rc8 17.Ng3 Be6 18.Bxe6 Nxe6 19.d4 exd4 20.cxd4 Ngf4* =/± Armas−Unzicker, BL 1990 *)*

A) 11.Re1

A1) 11...Bxe3 12.Rxe3 Ng6= was the most classical approach and Black gets easy equality. However, at this stage I wanted to keep more pieces and get d5 as early as possible.;

A2) 11...d5 I wanted to make this work but couldn't do so. 12.Bxb6 Qxb6 13.exd5 cxd5 14.Bb3 Ng6 *(14...Bg4* doable but this was not the point of playing d5 *)* 15.Nxe5! Nxe5 16.Rxe5 Ng4 17.Re2 Qd6 18.g3 I wasn't sure about my compensation here Ne5 *(18...Qh6 19.f3)* 19.Re3!± and I didn't see anything concrete for Black.;

A3) 11...Bc7 '!?' I will get d5 before he gets d4 so basically it will be some sort of reverse Italian with weird pawn structure on the queenside. 12.Nbd2 d5 13.Ba2 Ng6

A3a) 14.Bg5!? h6 *(14...Be6*

I was happy with this *)* 15.Bxf6 gxf6 even this was not so bad. Black will create some attacking chances on the kingside *(15...Qxf6 16.exd5 cxd5 17.Bxd5 Nf4 18.Ne4±)* 16.exd5 cxd5 17.c4 Nf4 with a messy position. I wasn't sure which one to opt for in the event of 14.♗g5. Both looked complicated and Black has good counterplay.;

A3b) 14.h3 h6 15.Qc2 Here I thought if I play ...♗e6 then he might have some d4 ideas so I came up with an interesting alternative instead. Bd7 '!?' *(15...Be6 16.d4* although the engine thinks this is also fine for Black *Nxe4 17.Nxe4 Bf5 18.Nfd2 Qh4!* being the point. *)* 16.Rab1 *(16.d4* with the bishop on d7 this never works *dxe4* no more ...♗e6 business *17.Nxe4 Bf5)* 16...Qc8 '!' Suddenly the idea of ...♗xh3 becomes annoying. The white queen is awfully placed at c2 which won't be able to reach f1 so fast after the sac on h3. 17.Nf1

A3b1) 17...Bxh3!? 18.gxh3 Qxh3 19.N3h2□ Otherwise White might as well resign *(19.Ng3 Nf4−+; 19.N1h2 Ng4−+; 19.Qe2 dxe4 20.dxe4 Nxe4−+)* 19...Nh4! looked tempting but I did not see a clear way *(19...d4 20.cxd4 exd4 21.Bxd4 Nh4 22.f4 Bxf4 23.Bxf6* wasnt' clear either *)* 20.f3 Nh5⩱ Surely Black has huge compensation but during the game I wasn't completely sure and hence decided to wait further.;

A3b2) 17...Nh5!? This was also very tempting 18.bxc6 bxc6 19.exd5 Bxh3 20.N1h2∞ Here also I did not see a clear cut way and I did not want to commit so fast.;

A3b3) 17...Rd8 The threat is better than its execution. 18.Ng3 Be6 '!' For now, just waiting. I did not see how white is improving and realised there are not many useful moves for White. Now that d4 is also not working (thanks to the queen on c8) I wanted to have my bishop on e6. *(18...Bxh3 19.bxc6 bxc6 20.gxh3 Qxh3 21.Qe2!±* now the queen is in time. As a matter of fact this was also the only move for White. *)* 19.Bd2 '?' Mostly he wanted to play c4 at some point and hence removed the bishop from e3 so that d4 will not come with tempo. *(19.Red1 Nf4! 20.Bxf4 exf4; 19.d4 Nxe4 20.Nxe4 dxe4 21.Bxe6 Qxe6* the advantage of having the queen on c8 *22.Qxe4 f5 23.Qc2 e4⇡; 19.Kh2* probably this was

practically the best..., get rid of ♗xh3 ideas. Definitely not a move that one would like to make with the bishop on c7. *Bd6 20.Bb6 Re8* I prefer Black here. *)* 19...Bxh3 '!' And now that ♕e2−♕f1 takes one more extra move....this is the time! Just the previous move Black played ♗d7 to e6 and now ♗e6 to h3. All thanks to ♗d2 which prevents ♕e2. 20.bxc6 Including this makes sense as it can only benefit White. bxc6 21.gxh3 Qxh3 No more ♕e2 business. 22.Rb7 *(22.Qd1 Nf4 23.Bxf4 exf4 24.Nf1 dxe4−+)*

A3b31) 22...dxe4 I checked this out a bit too. Trying to take on d2 23.Bxf7+ *(23.dxe4 Rxd2−+)* 23...Kh8 24.Ng5! Comps *(24.dxe4 Rxd2−+; 24.Nxe4* I saw this, which is also fine *Nxe4 25.Rxe4 Qxf3 26.Rxc7)* 24...hxg5 25.Bxg6±;

An unsuccessful decision. The exchange of bishops is in White's favour. ■ **3) Black Captures 9...exd4 [C**
Break the Evans Gambit: The Stone−Ware

1.e4 e5 2.Nf3 Nc6 3.Bc4 Bc5 4.b4 Bxb4 5.c3 Bd6 6.0−0 Qf6 Black has fortified his central outpost, his e5 strong point, and will bring out the King's Knight next turn. He stands ready to to repel any siege! **7.d4 Nge7 8.Bg5 Qg6 9.Nbd2** A simple move, and untested. It looks doubtful at first − we

take twice on d4 and there's a loose Bishop on g5, right? But guess who's in the details! The Knight may have a future on c4, but it really aims to reach e3 via the f1 square. All that takes 2 or 3 moves, however, and Black has time to prepare. Finally, these variations are worth comparing to the play in chapter 7 [/course/80564/7] with 8.Na3, where that Knight can also go to the e3 square.

9...exd4

[9...0−0 readily transposes elsewhere, and is seen in lesson 4 [/variation/14308798].]

10.e5

[The honest 10.cxd4?! runs into Nxd4∓ and Black is loving it.]

10...Bc5

[Taking 10...Bxe5?! is very dangerous; for example 11.Bxe7 dxc3 12.Nb3! sets a few problems. The wrong way is 12.Nxe5? Nxe5 13.Re1 d6 There is nothing better. 14.Nf3 Kxe7 'Scared is what you're feeling. Brave is what you're doing.' −Emma Donoghue 15.Nxe5 dxe5 16.Qd4 $13 and White has the initiative, but Black can seemingly shuffle his way out of this mess. Unclear. Continuing d6 13.Bd3 Qh5 14.Nxe5 Qxd1 15.Rfxd1 Nxe7 16.Nf3± and the mechanical brain values White at +0.90, which means it thinks that Black will lose a couple of pawns in the coming action.]

11.Nb3 Bb6?!

[After 11...h6?! 12.Bh4 Black finds he has erred by inserting this move pair, as he needs the enemy Queen's Bishop in capturing range. Bb6 13.a4! Taking 13.Bxe7?! is non−threatening, e.g. 13...Nxe7 14.Bd3 Qh5 $13 is quite acceptable, quite solid for Black, who also retains the Bishop pair. d5 14.exd6 cxd6 15.Re1! Correct. But 15.a5? Bd8 $13 flatlines at +0.00, with both sides on life support. It's anybody's game. Bh3 White's previous move has paralyzed Black, who must resort to this sequence. 16.Bg3 Be6 17.Bxe6 fxe6 18.cxd4± Black will return his surplus material, leaving White at minimum very satisfied.]

[Only 11...d6∞ in the first two lessons offers a path to equality.]

12.a4 d5 13.Bd3!

[Black would welcome 13.exd6?! cxd6 14.Re1 dxc3∞ with a happy lack of clarity.]

13...Bf5 14.Bxf5 Nxf5

[If 14...Qxf5?! then 15.a5 , and the b6 Bishop will be traded for a group of pawns, but White is winning.]

15.a5 dxc3 16.axb6 cxb6 17.Rc1±

And no, Black will not be able to sally forth using his 5 connected passed Queenside pawns. White has a clear advantage.

Break the Evans Gambit: The Stone−Ware

1.e4 e5 2.Nf3 Nc6 3.Bc4 Bc5 4.b4 Bxb4 5.c3 Bd6 6.0−0 Qf6 Black has fortified his central outpost, his e5 strong point, and will bring out the King's Knight next turn. He stands ready to to repel any siege! **7.d4 Nge7 8.Bg5 Qg6 9.Re1** This shifty Rook shift is most flexible, part of what makes it dangerous.

White lines up the Rook against our King while supporting his e−pawn, and he can slip easily into previous chapters − for example, lessons 7−9 of chapter 5 [/course/80564/5] are a near match and lesson 3 [/variation/13682975] of chapter 8 can also arise. Meanwhile he keeps the tension and waits. **9...0−0**
The shadow of that Rook on e1 towers over Black's King, but we think it best to delay castling and instead fianchetto (9...b6 or, perhaps, try 9...f6!? to support the e5 strong point. The fianchetto is seen in lessons 1−5, and the f−pawn support in lesson 6. The rest of this chapter considers castling for Black here − problematic, as it mostly involves giving up his e−pawn. We have indirectly weakened our strong point.
10.Nbd2
[Forward with 10.d5?! is giving Black what he wants − see Game 4 [/variation/13806336].]
[And the retreat 10.Be3 is a modest deployment, which Black can answer with b6 11.Nbd2∞ reaching positions that may arise from chapter 11 [/course/80564/11].]
10...exd4 Not forced, but interesting.
11.e5 Ba3 12.cxd4!? Nxd4
Black grabs another pawn, but White gets compensating activity. By the way, if White has compensation for his material, does that mean Black has compensation for his trouble? **13.Ne4 Nxf3+ 14.Qxf3 Bb4** Very unclear; for example: **15.a3! Bxe1 16.Bxe7 d5!**
[Better than 16...Re8?! 17.Bd3! Rxe7 18.Nf6+ gxf6 19.Bxg6 hxg6 20.Rxe1± with advantage.]
17.exd6 Ba5
[The risk−on play 17...Bg4!? looks questionable after 18.Qf4 Ba5 19.Bd3 f5± and we've given 3/5 of a notional pawn to White.]
18.Bxf8 Kxf8 19.Ng5! White is focused on maximum activity; the Knight is untouchable. **19...cxd6**
[Simpler than 19...Qf5 20.Nxh7+ Kg8 21.Ng5 Qxf3 22.gxf3 Kf8 and Black enters an equal ending, but will ultimately play minus a pawn.]
20.Nxh7+ Ke7∞
[Black chooses to run Queenside with good chances; in spite of everything he still owns an extra b−pawn. He might also consider 20...Kg8 , which leads to 21.Ng5 Qxg5 22.Qxf7+ Kh7∞ and another exciting chase!]

[There is nothing better. If 10.Na3?! then Bxc3∓ with another pawn in the bag.]
10...Kxe7 Perhaps White thought to exploit the position of Black's King at e7, but our Monarch is perfectly safe.
11.Bd5 This pestering move will be seen in several settings. Besides threatening our King's Bishop, White may shatter the enemy Queenside pawns, or make the ...b7−b6 development more difficult for Black. The first thing, however, is to safety our Bishop. **11...Bf6 12.Re1**
[White needs to enforce e4−e5 to get anything for his pawn. He doesn't launch forward 12.e5!? immediately on account of Nxe5 13.Nxe5 Bxe5 14.Re1 Qf5! stopping the f2−f4 threat. Now after 15.Qd4 Kf6 Black seems to have escaped his troubles. But 16.Qd1! sets a few problems, including a potential Re3−f3 Rook lift. The best reply seems to be d6 if Black wants to press the opponent. Incidentally, White was offering an unusual draw by repetition if 16...Ke7 17.Qd4 Kf6= , etc. Continuing 17.f4 Bxf4 18.g3 c6 Clearing the fifth rank. 19.Bb3 Qc5+ 20.Kh1 Bf5! 21.gxf4 Rhe8∓ and Black has a substantial lead.]

13.Bxc6 bxc6 14.e5 dxe5 15.Nxe5!?
[The adventurous 15.Qd4 is worth a look, as the reply Bh3!∞ is quite messy. After 16.Qc5+ Kd8 17.Rd1+ Kc8 18.Ne1 Bd7∓ we should take inventory. Black has two Bishops vs. two Knights, along with two extra pawns. To get these notable advantages, however, Black's King had to flee across the board and remains somewhat exposed. The silicon wafer registers a quarter pawn for Black in this position, without mentioning that it looks like fun!]
15...Bxe5 16.Rxe5+ Be6∓ Black retains his extra pawn, doubled as it is, with a slight lead in development. Small nod to Black.

Qg6 9.Be3 White falls back, content to have pushed the Queen away from her strong point, and onto a square reserved for the King's Knight. This variation can be tiresome to meet, as White may try to outwait us. Black needs to be stalwart and steady. **9...0−0**

[Tucking away the King. There is also 9...b6 10.Nbd2 0−0 which merely transposes below and into the next two lessons. This variation is closely related to chapter 6 [/course/80564/6] and the latter half of chapter 14 [/course/80564/14], with transpositions possible. The normal looking 10...Bb7!? is playable but commits the Bishop, which may belong on the a6 square − see the main line here and in the next two lessons. After 11.Bd3 $14 White earns a +0.45 score from the Great Enumerator.]

10.Nbd2 b6

[10...Kh8!? is deep prophylaxis... maybe. See Game 3 [/variation/13806334].]

11.Bd3

[Taking aim at the Queen and preparing Nd2−c4. Instead 11.Re1∞ would be a possibility via chapter 14 [/course/80564/14].]

11...Qh5 In chapter 13, lesson 4 [/variation/14308798], we get here by the 9.Nbd2 move order. **12.Nc4 exd4 13.cxd4 Ba6!** It was time to release the White center, as Black is now fully developed. The text move sets up a semi−pin on the opposing Queen's Knight, since if White captures on d6 we insert ...Bxd3 before retaking. **14.Rc1**

[White seems to arrive nowhere by 14.e5 Bb4∞ , which leaves a hole on the d5−square. Black can retreat his Bishop to a5 if needed, and meanwhile he seems remarkably unperturbed by what's happening on the board!]

14...Nb4

[Best. After the tempting 14...Bxc4?! 15.Bxc4 Kh8± Black has yielded the Bishop pair and resolved the center in White's favor.]

15.Bb1 Nbc6

[We dislike making this return trip, but Black has pulled the emergency cord! His problem is to find a square for the King's Bishop, ideally e7; however 15...Ng6?! results in a train wreck after 16.Nxd6 cxd6 This interesting pawn structure appears from time to time, mostly okay for Black. Not so much here though. 17.Re1 Nc6 18.d5± , and Black is left to salvage debris. From here Nce5 19.Nd4 Qxd1 20.Rcxd1!± is +0.70 rubble.]

16.e5 Bb4 17.Qa4 Bxc4 18.Rxc4 Nd5 Black is filling in the gaps. **19.a3**

[Putting the question to Black's Bishop. If instead White tries 19.Be4!? then Nc3! holds the line, e.g. 20.Qc2 looks safe and sane. But the Exchange sacrifice 20.Rxc3 Bxc3 lets White keep his Bishop pair, and 21.Qc4 Ba5 $13 offers compensation to both sides. Black trades Nxe4 21.Qxe4 and now b5!∞ is mighty unclear.]

19...Ba5 An awkward necessity, but the Bishop isn't stuck there forever. **20.Qb5** White is going after the d−pawn, and we really must comply. Now Black aims to build a strong fortress. **20...Nce7 21.Qxd7 c6± 22.−−**

[Let's assess: White has the Bishop

pair and more space, but his two center pawns are a question mark − strong or weak? Black has slightly better structure and a Queenside pawn majority to be activated shortly by pushing the b−pawn, which also releases his King's Bishop. In addition, the White Queen is in temporary difficulty, and so 22.h4 will be played to open a retreat square behind it. Then b5 and, if the Rook moves back to the first rank, Black has a quick ... f7−f5−f4 leaving the e3 Bishop with nowhere to go − vastly unclear. That's why the sneaky 23.Rc5! is a good move. White pulls our King's Bishop away to 23...Bb6 and only then 24. Rcc1 when Black's f−pawn charge is less effective. The bottom line is that White is worth at least +0.40 in fractional pawns. Theoretically. According to sources familiar with chip architecture.]

[12.Ne3 Bxb3 Black's play in this phase of the game looks a bit "cooperative", allowing White to obtain some pressure. game proves that White's kingside initiative can be kept under control. However, White can combine it with the opening of the centre by means of d4. 18.Qf3 Qe6 19.Qg3 Rg8 20.Qh4 Nd7 21.Bg5 Not really an attacking move. White just connects his rooks. Rbe8 22.Rad1 Qg6 23.Bc1± 1/2 Andriasian,Z (2523)−Jussupow,A (2605)/Dresden 2007 (47) White has managed to complete his development without exchanging the dark−squared bishops, which increases his attacking possibilities. Given White's more active position, the h6−square is more vulnerable than the f2−square, which transforms the a7−bishop into a spectator. Another important achievement is that the f5−knight cannot be exchanged too easily.]

A line that is becoming fashionable thanks to Anand. In general Aronian plays actively against the Italian, setting up immediate castling, and preparing d5. Had he gone for a6, planning ...♗a7, instead of a5, he would have ended up in one of those 'timid' positions, though the line is losing popularity in light of recent theoretical developments. **6...a6** is another very serious possibility, but for this game I wanted to put my pawn on a5. leads to the main lines but Aronian is not interested in a mainline theoretical battle today!

A2) 10...Kh8!? This move is already a foray into rare territory, and according to my database is a novelty. Aronian is attempting to improve on his own play. Before, two times against the same opponent, Fabiano Caruana, including in the prelimiarly blitz event before the main tournament in Norway, Aronian played 10...♘d7!? 11.c3 Nh7 This is the point of ...♔h8. No, we haven't sunk this low, but it's the only move Black has tried over the board. Instead of preventing Na3−b5 he ought to welcome the Knight there, rather than sending it to the much more dangerous e3 square. Still, the various assaults White is able to mount against the Black King are worth noting. **9.Nc2±**

Black has fortified his central outpost, his e5 strong point, and stands to repel any siege − provided he develops the King's Knight on his next [/variation/13926859] turn! **7.d4 h6!?**
[We can't really ignore this old−school approach. There are too many crossovers, intersections, and possible transpositions to 7...Nge7 in the main line [/course/80564/2]; too many shared themes, patterns, and ideas. These are all valuable to the Steinitz System in their own right, and will help us to understand the whole opening.]
8.Nbd2
[Likely the most complicated of White's options, maybe more important than 8.Na3 in the next chapter [/course/80564/17]. Black doesn't get the option to capture the Knight; it's free to maneuver and plenty can happen. Of course, all of that works in two directions, and Black should simply get on with his program.]
8...Nge7 9.Re1 Ng6
[It may be that Black can delay castling. Instead 9...b6 will transpose into previous lessons if Black does castle short next turn, but in that case the fianchetto is currently under a cloud − see lesson 6 [/variation/13944259].]
10.Nf1 Qd8?! In lesson 7 [/variation/13944265] where Black has castled already this retreat is also ineffective.
11.Ne3 Be7 12.Nf5 Bf6 Observe that twelve moves into lesson 7 [/variation/13944265] White could then threaten instant destruction with his Qd1−d2 power play. Here he must find a different tack. **13.Qa4!** And he does. With the Queen in position White is prepared to execute the mortifying d4−d5−d6 bayonet thrust to our mid−section.
13...a6
[There is little Black can do to prepare himself; for example 13...0−0 14.d5 Nb8 15.d6± , with perhaps Bc1−a3 following, is clearly better for White.]
14.d5
[Here it comes. Of course Black was hoping for 14.Nxe5? Ngxe5 15.dxe5 Bxe5∞ , giving him time to reorder his defenses.]
14...Na7 15.d6± −−
[No need for gory details − the Black position is likely to bleed out. It's enough to say that triage, with either 15...0−0± or]
[15...b5± , offers no remedy. The White advantage tops 0.75 in all these lines, according to...well, you know who.]

1.e4 e5 2.Nf3 Nc6 3.Bc4 Bc5 4.b4 Bxb4 5.c3 Bd6 6.0−0 Qf6 Black has fortified his central outpost, his e5 strong point, and will bring out the

King's Knight next turn. He stands ready to to repel any siege! **7.d4 Nge7 8.Bg5 Qg6 9.Re1** This shifty Rook shift is most flexible, part of what makes it dangerous. White lines up the Rook against our King while supporting his e−pawn, and he can slip easily into previous chapters − for example, lessons 7−9 of chapter 5 [/course/80564/5] are a near match and lesson 3 [/variation/13682975] of chapter 8 can also arise. Meanwhile he keeps the tension and waits. **9...0−0**
The shadow of that Rook on e1 towers over Black's King, but we think it best to delay castling and instead fianchetto (9...b6 or, perhaps, try 9...f6!? to support the e5 strong point. The fianchetto is seen in lessons 1−5, and the f−pawn support in lesson 6. The rest of this chapter considers castling for Black here − problematic, as it mostly involves giving up his e−pawn. We have indirectly weakened our strong point.
10.Nbd2
[Forward with 10.d5?! is giving Black what he wants − see Game 4 [/variation/13806336].]
[And the retreat 10.Be3 is a modest deployment, which Black can answer with b6 11.Nbd2∞ reaching positions that may arise from chapter 11 [/course/80564/11].]

13...Bb4
[Black would like to trade pieces. Instead, prodding the Bishop with 13...h6?! is a mistaken notion due to 14.Nh4!± with advantage.]
14.Bd2
[A possible improvement is 14.d5 , and after the straight line sequence Bxe1 15.dxc6 Bxf2+ 16.Nxf2 dxc6± White is at the plus 1/3 pawn mark. His minor pieces will look to harass the Black Queen.]
14...Bxd2 15.Qxd2 d5 Black must return the gambit pawn to complete his development. **16.Bxd5 Be6 17.Bxc6**
[Another game starts from 17.Bxe6!? fxe6± with an edge to White.]
17...bxc6 18.Rac1 Bd5±
The mechanical precision of White's play has been admirable; he's up +0.30 for his trouble.

With the black fianchetto on the kingside the most reasonable plan for White is quick d4 expansion and play on the queenside. Very rarely Black goes for g4, h5 and h4, but instead he develops the bishop on g7 aiming to obtain an active position and fight against White's idea of d4 central push. Also, Black has g4 or Bg4 at his disposal. On the other hand, if White plays h3 with the idea of d4, timely g4 push would put the white king in danger if the position opens up. So, in my opinion, White should manoeuvre with great caution and try to use the weak f5 square. **7.Nbd2**

Break the Evans Gambit: The Stone−Ware

1.e4 e5 2.Nf3 Nc6 3.Bc4 Bc5 4.b4 Bxb4 5.c3 Bd6 6.0−0 Qf6 Black has fortified his central outpost, his e5 strong point, and will bring out the King's Knight next turn. He stands ready to to repel any siege! **7.d4 Nge7 8.Na3** This lateral deployment of the Queen's Knight introduces a central theme for White against the Stone−Ware Steinitz System. The move is White's top reply if Black goes for the 7...h6 [/course/80564/15] version of our opening − the only version recognized if the Steinitz System is mentioned at all! White plans various Knight maneuvers designed to annoy the exposed enemy Queen and King's Bishop. Black can either press on with his usual development scheme, or take off the bothersome Knight. **8...Bxa3** Exchanging on a3 is our recommended answer to White's sideways development, both here and in the 7...h6 8.Na3 [/course/80564/17] section. The capture is absolutely Black's clearest route, a simple method which can be reduced to a jingle: 'Chop off the Knight, it's only right; then prop up the pawn, or else you're gone!' Gone fishing, that is, fishing in troubled waters. We'll see that allowing White to hop all over the board opens a maze of possibilities that look like other possibilities we look at otherwhere! It's that confusing. However, X_Master informs us that Black may actually want to enter such a puzzle of his own making, and that most of the byways are good for us anyway! Be that as it may, let's start with the easy path, capturing the stray horse. **9.Bxa3 d6** White has gained the Bishop pair, Black has gained some breathing room. We believe this position is fireproof, and that Black holds a small $15 safe edge. Maybe because of that surplus foot soldier? **10.d5**

[Related to chapter 3 [/course/80564/3], and facing the same long term issue − in a closed position Black can reorganize himself and make that extra pawn count. If instead 10.Bb5!? then Bg4∓ or even castle here, and what can White do next?]

10...Nb8 11.Bb5+

[Anything else and Black simply castles. If 11.Nd2 0−0∓ , or]

11...Nd7!? 12.Qb3 Ng6
[We can see hard core defense at work in the line 12...Rb8!? , and if 13.Qc4 then Kd8∓ holds tight with a +0.40 edge for Black.]

13.Bxd7+ Bxd7
[Black returns the pawn to finish development − a gambling move for active players. But interesting proof that the King is a strong piece is the capture 13...Kxd7!∓ here, which is worth playing if only to see the look on White's face. Meanwhile credit Black's account with nearly 1/2 a pawn. And since we get the same plus score here as from giving back the pawn, choosing is really a matter of temperament.]

14.Qxb7 Qd8 15.Bc1
[Or 15.Rfb1 0−0∓ with much better chances for Black.]

15...0−0 16.Be3 f5∓ Now Black turns his attention Kingside. The Bishops of opposite color may prove useful in pressuring the enemy King.

[We can't really ignore this old−school approach. There are too many crossovers, intersections, and possible transpositions to 7...Nge7 in the main line [/course/80564/2]; too many shared themes, patterns, and ideas. These are all valuable to the Steinitz System in their own right, and will help us to understand the whole opening.]

8.Nbd2

[Likely the most complicated of White's options, maybe more important than 8.Na3 in the next chapter [/course/80564/17]. Black doesn't get the option to capture the Knight; it's free to maneuver and plenty can happen. Of course, all of that works in two directions, and Black should simply get on with his program.]

8...Nge7 9.Re1 0−0 We now have a look−alike from chapter 5 [/course/80564/5], except it would be Black's move there and he could do something useful, like 9...b6. Here Black can still eke out a living − if he's careful!

[Although castling just now isn't forced it's probably best; the 9...Ng6!? try seen in lesson 8 [/variation/20417463] breaks apart like a ship on the shoals.]

[Instead 9...b6 will transpose to previous lines, especially lesson 6 [/variation/13944259], where we find White putting the kibosh on this fianchetto.]

10.Nf1 It's worth mentioning that, compared to 8.Na3 in the next chapter [/course/80564/17], White's route to e3 takes a move longer in this variation, on account of having to vacate the f1 square. That's why, especially after 8. Na3, we like taking that Knight.

10...exd4

[We have decided to castle on the nineth move, and so Black needs a plan here on his tenth. Since both 10...b6 and]

He stands ready to to repel any siege! **7.d4 Nge7 8.Bg5 Qg6 9.Re1** This shifty Rook shift is most flexible, part of what makes it dangerous. White lines up the Rook against our King while supporting his e−pawn, and he can slip easily into previous chapters − for example, lessons 7−9 of chapter 5 [/course/80564/5] are a near match and lesson 3 [/variation/13682975] of chapter 8 can also arise. Meanwhile he keeps the tension and waits. **9...b6**
The shadow of that Rook on e1 towers over Black's King, but we think it best to delay castling (9...O−O and instead fianchetto 9...b6 or, perhaps, try 9...f6!? to support the e5 strong point. The fianchetto is seen in lessons 1−5, and the f−pawn support in lesson 6. 3.Bc4

[I would mention the following Ruy Lopez line: 3.Bb5 a6 4.Ba4 d6 5.c3 f5 The so−called Siesta variation. 6.exf5 Bxf5 White's bishop is better placed in this line than in the Italian variation, pinning the knight and not being exposed to ...d6−d5. 7.0−0 Bd3 8.Re1 Be7 9.Bc2 Bxc2 10.Qxc2 Nf6 11.d4⩲]

3...d6 4.c3 This move requires from Black certain accuracy. **4...f5!?** In my (possibly subjective) opinion, the only adequate answer. Black takes advantage of the fact that White has delayed both his castle and the occupation of the centre. We can call the last move an improved version of the original Philidor's idea. Black uses as many pawns as possible to fight for the centre. The relative weakness of the a2−g8 diagonal is not dangerous, as White is not too well developed.

According to Karjakin's tweet "Loran" Fressinet told him ♘xg5 never works in the Italian. I am quite sure that Magnus's on− and off−second informed his boss about the exceptions! is unlikely to be repeated, after 9.Nxg5 hxg5 10.Bxg5 Kg7 11.Qf3 Be6

A) 12.Bd5! '**±**!' White would have a powerful attack. For details see the notes in CBM 177 by G.Meier. '**±**!' This creates a terrible bind, since Black is at pains to defuse the pin. ♘b8−d7 is the only manoeuvre left to do so, but drops the exchange. C) 12.b4? Bb6 13.Bd5 a5! Given a second lease on life Karjakin is going to play very well from here on. A main reason for him being dubbed "World Defence Champion" by colleague Giri and others must be that he seems so unaffected by his mistakes. He can commit the most despicable errors and then show world−class toughness from the next second! 14.b5 Nb8 Not only will the rook not drop, but Black has secured squares on the queenside forever. [Ivanisevic,Ivan]

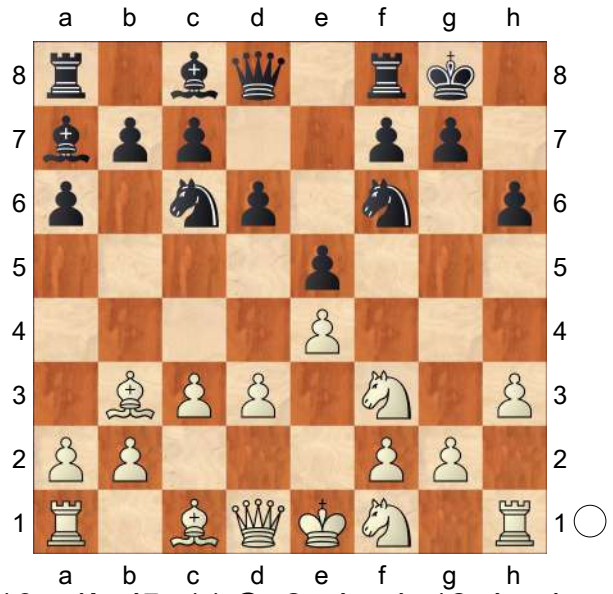
1.e4 e5 2.Nf3 Nc6 3.Bc4 Bc5 4.c3 Nf6 5.d3 a6 In recent times the Italian game became the most popular of all the 1.e4 e5 openings. The struggle has a profound strategic character, with deep

and long manoeuvres, so a stronger player usually prevails. Here we will explore the situations where White can essay g4 (or g5 for Black). These pawn pushes are possible under certain circumstances...

[5...d6 6.Bb3 0−0 7.h3 a6 8.Nbd2 In this position the g4 idea might work if White provokes h6. Therefore, White plays all the useful moves. For example: Be6 *(8...Ba7 9.Nf1 h6* Diagram



10.g4! d5 11.Qe2 dxe4 12.dxe4 Be6 13.g5 hxg5 14.Bxg5↑ Fedorov,Alexei 2562 − Patil,Pratik 2167, Mumbai 2019/20 *)* 9.Bc2 d5 10.Qe2 h6 11.g4! Nh7 12.Rg1 d4 13.Nb3 Be7 14.Nxe5!? Nxe5 15.Nxd4 c5 16.Nf5⩱ Duda,Jan Krzysztof 2706 − Eljanov,Pavel 2720, Deutschland 2017]

6...d6

[6...Ba7 7.a4 h6 8.Na3 d6 9.Nc2 White is intending to trade the light−squared bishops with 10.Be3, making it less appealing for Black to go for g5 advance. But, Black obtained a very solid position by playing with great precision. Ne7 10.Be3 Ng6 11.Bxa7 Rxa7 12.d4 Bd7= Atlas,Valeri 2435 − Banusz,Tamas 2612, Oesterreich 2017]

7.a4 Over the last year this has been the most popular plan for White. He is not intending to move the b1−knight too soon (delaying the usual d2−f1−g3 or e3 route). Instead, White is expanding on the queenside, and preparing the b4 push while waiting for Black to castle when Bg5 may prove to be a really tricky pin to deal with. The b1−knight may go to a3 and then to c3 or c4.

[7.Bb3 Ba7 8.Nbd2 h6!?]

If Black played the useful 8...h6 move White should try to avoid playing h3, because that severely weakens the white king. **10.b4**

C2a) Due to the exposed rook on e3, Black could think of breaking in the centre himself: 11...d5 12.exd5 Nxd5 13.Re4!? C2b) 11...Re8 Taking the usual measures against d3−d4. 12.d4 The most active move but *(12.Qb3 Re7 13.a5* would have offered White a small plus, delaying the central committment. *)*

C2b1) If Black wanted to play ...♗c8−g4, it is better, indeed, to release the tension first. If 12...Bg4 13.Qb3 Qd7 14.dxe5 dxe5 *(14...Nxe5 15.Nxe5 dxe5 16.Rd3 Qe7 17.Qxb7±)* 15.Rd3 Qe7 16.Qxb7 Na5 17.Qb4 Qxb4 18.cxb4 Nxc4 19.Nxc4 Bxf3 *(19...Nxe4 20.Nfxe5±)* 20.gxf3 Defending e4. Rab8 21.Rb3 Nh5 22.Rc1± Black's structure is imperfect but he is a pawn up after all and Black also has weaknesses on the

queenside.;
C2b2) 12...exd4!?
An enterprising move. 13.cxd4 Bg4 This will eventually lead to an interesting structure. *(13...d5* is playable, but Black is mainly struggling a bit: *14.exd5 Rxe3 15.fxe3 Nxd5 16.Qe2 Qd6 17.e4 Nb6 18.Qe3 Nxc4 19.Nxc4 Qb4* White's chances to put his impressive centre into motion are slightly marred by his queenside weaknesses. *)* 14.Qb3 Qd7 15.Bd3 The most solid move. *(15.e5* leads to simplifications and approximate equality: *Na5 16.Bxf7+ Qxf7 17.Qxf7+ Kxf7 18.exf6 Rxe3 19.fxe3 Kxf6=; 15.a5 Bxf3* wins one of the central pawns. *)* 15...d5 16.e5 *(16.exd5* only makes sense if White goes for the b7− pawn but this is dubious: *Nxd5 17.Rxe8+ Rxe8 18.Qxb7 Ndb4 19.Be4 Bxf3 20.Bxf3 Nxd4∓* Black has two excellent knights, dominating the board. *21.Qxb4? C2b21) 18.exf6 is simpler and not necessarily less strong. Rxe3 19.fxe3 Bxf3 Clearing the g4−square for the knight in view of the possible sequence below. *(19...Nxf6? 20.Ne5 Nxe5 21.dxe5 Nh7 22.Qxb7+−)* 20.Nxf3 Nxf6 21.Ne5 *(21.e4 Qg4 22.Rf1 Rd8* allows Black to complete his development with effective pressure against the white centre. *)* 21...Nxe5 22.dxe5 Ng4 23.Qxb7 Black has obvious chances for kingside counterplay but the plan of grabbing a6 and advancing his own pawn is simple and relatively quick.;
C2b22) 18.Ree1 By keeping the kingside closed Kramnik shows that he believes in his space advantage, but takes up the risk that Black's slow attack would prevail. 18...a5
C2b221) The only way to prevent Black's next move was 19.Bb5 Kramnik might have

feared moving with the bishop far from the kingside (with the possible plan of exchanging it on c6) but it seems that he could have maintained the control: f4 20.Rac1 Qe6 21.Rc5 Rad8 *(*White seems to be a bit hanging after *21...Rf8 22.Rxd5 Kh8* but *23.Bc4±* consolidates. *)* 22.Bxc6 bxc6 23.Qc3**±** Black's queenside will soon be in ruins and there is no obvious way of including the passive knight in the attack.;

C2b222) 19.Rac1?! After this indiferrent move, allowing the c6− knight's activation, Black can solve a big part of his problems. 19...Nb4 Black is rock solid and safe on the queenside and the main events will most likely take place on the opposite wing.

C2b2221) 20.Bb1 inhibits ..f5−f4 but allows the active Ra6 *(20...f4?! 21.e6! Bxe6 22.Ne5 Qd6 23.Bg6±)* 21.Kg2 f4 22.Ng1 g5⇄;

C2b2222) Kramnik misses the last chance for figthing for the initiative: 20.e6!?

C2b22221) 20...Rxe6 21.Ne5 Qe7 *(*In principle d6 is a better square for the queen, but *21...Qd6* allows *22.Ndc4! dxc4? 23.Bxc4+−)* 22.Bb1 Bh3 23.Ndf3 g5 24.Nd3 Nf6 25.Nc5 Rxe1+ 26.Rxe1 Ne4 27.Nxe4 fxe4 28.Bxe4↑;

C2b2223) 20.Bf1 This passive move absolves Black of any problem. 20...f4 Black's initiative threatens to become concrete. 21.e6 After Black cleared the path backwards for his bishop this is less strong than one move earlier, allowing White only to avoid the worse

of it. Bxe6 22.Ne5 Qd6 23.Qf3 Retrieving the pawn. 6.Bg5

[6.0−0 is not scary, Black plays h6 to prevent ♗g5 then

A) During the game, I was mainly focused on 7.Be3 , but it looks rather harmless: Bxe3 *(* But *7...d6!?* might lead to a very unbalanced position: *8.Bxc5 dxc5 9.Bb5 Nd4 10.Nxe5 Nxb5 11.Nxb5 Qe8 12.Nxc7 Qxe5 13.Nxa8 Ng4 14.g3 Bd7 15.h3 Nf6 16.f4⇄)* 8.fxe3 d6 9.a3 *(9.Qe1 Na5=)* 9...Be6 10.Bxe6 fxe6 11.d4 exd4 12.exd4 e5= Sek,K − Smirnov,P Vladivostok RUS 2015;

B) 7.Nd5 d6=;

C) 7.Na4 This move was played rapidly, as was it was still a part of GM Fedoseev's home preparation.

However, I was quite happy to see the opponent's knight moving away from the centre. 7...Be7 8.a3 Securing the bishop on the a2−g8 diagonal. d6 *(8...d5?!* is premature: *9.exd5 Nxd5 10.Re1* and the pressure on the ♙e5 is rather unpleasant. *)* 9.h3 Be6 This natural move is a novelty. *(*The previously played *9...a6 10.Nc3 Be6* , Corlatescu,D−Ionescu,C Sovata 2002, seems logical and can be well met by *11.Nd5 Qd7 12.Be3* , and White's position is somewhat better. *)*

C1) Most probably, 10.Re1 would be met by Nd4 *(*A more complex position might arise after *10...a6 11.Nc3 Nxe4 12.Rxe4 d5 13.Nxe5 dxe4 14.Nxc6 bxc6 15.Bxe6 fxe6 16.Nxe4*⩲ White has full compensation for an exchange. *)* 11.Nc3 Nxf3+ 12.Qxf3 c6=;

C2) 10.Bxe6 fxe6

C2a) 11.c4 looks more consistent, intending to seize some space on the queenside. However, exposing the d4−spot isn't to everyone's taste. The play might continue: Nh5 *(*Another possibility is *11...Nd4 12.Nxd4 exd4 13.f4 e5*⇄ *)* 12.Nc3 Qe8 13.Be3 Qg6⇄ , and Black's counterplay on the k−side shouldn't be underestimated.;

C2b) 11.Nc3 Qe8 The queen is moving towards g6−spot and supporting the potential transfer of the knight to f4 *(*I didn't fully trust the committal *11...d5!?* , but it is deserving of serious attention too: *12.Re1 Bd6 13.b4 a6*⇄ *)* 12.d4 This ambitious advance is the most natural way of handling the position. *(12.Ne2 Nh5 13.c3 Qg6 14.Kh2 d5*⇄ offers Black lots of activity on the kingside. *)* 12...Nxd4 13.Nxd4 exd4 14.Qxd4

C2b1) Strangely enough, I didn't even consider the other natural option: 14...Qf7!? 15.f4 *(15.e5 Nd5 16.exd6 Bf6 17.Qd3 Nxc3 18.bxc3 cxd6=)* 15...c5 16.Qd3 d5 17.e5 Nd7⇄;

C2b2) 14...Qc6 15.e5 This was almost forced. *(*In the event of *15.Be3 Nd7 16.Qd2 Bf6 17.Bd4 Ne5 18.b3 Ng6* Black's position looks more flexible. *)*

C2b21) but there was no reason for rejecting 15...Nd5

C2b211) After 16.Qg4?! Nxc3 17.Qxe6+ *(17.Bxh6 Ne2+ 18.Kh1 Rf7*∓ *)* 17...Kh7 18.bxc3 Rae8↑ White's position is almost ruined.;

C2b212) 16.Nxd5 Qxd5 17.Qg4 Qxe5 18.Bxh6 Bf6 19.c3 Qf5=;

C2b22) 15...dxe5 Black's active piece play

fully compensates for some structural drawbacks, 16.Qxe5 Nd5 *(16...Rae8!? 17.Qb5 Qxb5 18.Nxb5 Nd5 19.c4 a6 20.cxd5 axb5 21.dxe6 Bc5=)* 17.Nxd5 Qxd5 18.Qe2 At this moment I was experiencing some time problems, so keeping the queens on the board seems a correct decision. *(18.Qxc7* is harmless: *Bd6 19.Qc3 Rac8 20.Qb3 Qxb3 21.cxb3 Rc2 22.Be3 Rxb2 23.Rfd1 Bf4 24.Bxa7 Rxb3=)* 18...Bc5 The pressure on the ♙f2 isn't that effective. *(*A simpler way of equalising was *18...Rad8 19.Be3 Qe5! 20.c3 Bd6 21.g3 Bc5= Δ22.Qb5?? Aticipating Black's planned attack, White decides on neutralising the annoying pressure along the g1−a7 diagonal. 9...Bxe3 10.Rxe3 0−0 *(* Actually there are no obvious reasons for refraining from the initial plan (if this was the plan, indeed). The exchange of bishops has only increased Black's stability on the dark squares without reducing the impact of the pawn attack too much: *10...g5 11.d4 g4 12.Ne1 h5 13.Nc2 h4 14.Nd2 Nh5∞)* 11.Nbd2

C2a) Due to the exposed rook on e3, Black could think of breaking in the centre himself:

11...d5 12.exd5 Nxd5 13.Re4!? This practically wastes a tempo, but it more or less forces Black into exposing one of his pieces. *(13.Re1 Nf4 14.Nxe5? Qg5−+)* 13...Bf5 *(13...Nf4 14.Nxe5 Qg5 15.Rxf4 Qxf4 16.Ng6±; 13...Re8 14.d4±; 13...Qd6 14.Re1* will retrieve the tempo on the next move with ♘e4. *)* 14.Re1 Nf4 15.Nxe5 Nxe5 *(15...Qg5? 16.Qf3±* is good for White as with the bishop on f5 the e5−knight is not hanging any more. *)* 16.Rxe5 Bxd3 17.Qf3 Qf6 18.Re3 Bxc4 19.Nxc4 with just some symbolic initiative for White.;

C2b) 11...Re8 Taking the usual measures against d3−d4. 12.d4 The most active move but *(12.Qb3 Re7 13.a5* would have offered White a small plus, delaying the central committment. *)*

C2b1) If Black wanted to play ...♗c8−g4, it is better, indeed, to release the tension first. If 12...Bg4 13.Qb3 Qd7 14.dxe5 dxe5 *(14...Nxe5 15.Nxe5 dxe5 16.Rd3 Qe7 17.Qxb7±)* 15.Rd3 Qe7 16.Qxb7 Na5 17.Qb4 Qxb4 18.cxb4 Nxc4 19.Nxc4 Bxf3 *(19...Nxe4 20.Nfxe5±)* 20.gxf3 Defending e4. Rab8 21.Rb3 Nh5 22.Rc1⩲ Black's structure is imperfect but he is a pawn up after all and Black also has weaknesses on the queenside.;

C2b2) 12...exd4!? An enterprising move. 13.cxd4 Bg4 This will eventually lead to an interesting structure. *(13...d5* is playable, but Black is mainly struggling a bit: *14.exd5 Rxe3 15.fxe3 Nxd5 16.Qe2 Qd6 17.e4 Nb6 18.Qe3 Nxc4 19.Nxc4 Qb4* White's chances to put his impressive centre into motion are slightly marred by his queenside weaknesses. *)* 14.Qb3 Qd7 15.Bd3 The most solid move. *(15.e5* leads to simplifications and approximate equality: *Na5 16.Bxf7+ Qxf7 17.Qxf7+ Kxf7 18.exf6 Rxe3 19.fxe3 Kxf6=; 15.a5 Bxf3* wins one of the central pawns. *)* 15...d5 16.e5 *(16.exd5* only makes sense if White goes for the b7−pawn but this is dubious: *Nxd5 17.Rxe8+ Rxe8 18.Qxb7 Ndb4 19.Be4 Bxf3 20.Bxf3 Nxd4∓* Black has two excellent knights, dominating the board. *21.Qxb4? pawn sacrifice: *17.Nxe4 dxe4 18.Bxe4 Bxf3 19.Bxf3 Nxd4 20.Qxb7±)* 17.g3 f5 Adding more strategic tension.
*(*A player with a cautious style might have considered *17...g6)*

C2b21) 18.exf6 is simpler and not necessarily less strong. Rxe3 19.fxe3 Bxf3 Clearing the g4−square for the knight in view of the possible sequence below. *(19...Nxf6? 20.Ne5 Nxe5 21.dxe5 Nh7 22.Qxb7+−)* 20.Nxf3 Nxf6 21.Ne5 *(21.e4 Qg4 22.Rf1 Rd8* allows Black to complete his development with effective pressure against the white centre. *)* 21...Nxe5 22.dxe5 Ng4 23.Qxb7 Black has obvious chances for kingside counterplay but the plan of grabbing a6 and advancing his own pawn is simple and relatively quick.;

C2b22) 18.Ree1 By keeping the kingside closed Kramnik shows that he believes in his space advantage, but takes up the risk that Black's slow attack would prevail. 18...a5

C2b221) The only way to prevent Black's next move was 19.Bb5 Kramnik might have feared moving with the bishop far from the kingside (with the possible plan of exchanging it on c6) but it seems that he could have maintained the control: f4 20.Rac1 Qe6 21.Rc5 Rad8 *(*White seems to be a bit hanging after *21...Rf8 22.Rxd5 Kh8* but *23.Bc4±* consolidates. *)* 22.Bxc6 bxc6 23.Qc3**±** Black's queenside will soon be in ruins and there is no obvious way of including the passive knight in the attack.;

C2b222) 19.Rac1?! After this indiferrent move, allowing the c6−knight's activation, Black can solve a big part of his problems. 19...Nb4 Black is rock solid and safe on the queenside and the main events will most likely take place on the opposite wing.

C2b2221) 20.Bb1 inhibits ..f5−f4 but allows the active Ra6 *(20...f4?! 21.e6! Bxe6 22.Ne5 Qd6 23.Bg6±)* 21.Kg2 f4 22.Ng1

C2b2223) 20.Bf1

This passive move absolves Black of any problem. 20...f4 Black's initiative threatens to become concrete. 21.e6 After Black cleared the path backwards for his bishop this is less strong than one move earlier, allowing White only to avoid the worse of it. [Christoph Scheerer]

The Giuoco Piano in the Modern Era: From the beginning of the 19th Century, opening theory began to develop at an accelerated tempo, and ways and means were found to oppose the Giuoco Piano, rendering it rather harmless. Indeed, players turned their attention to other openings, most notably the King's Gambit and the Evans Gambit. By the beginning of the 20th Century the Giuoco Piano had virtually vanished from tournament play, and even though there have been several attempts to find improvements (see Chapter 35), it seems that the Giuoco Piano in its original form can be shelved. −−− Nowadays the only way for White to fight for an opening advantage seems to be a calm approach involving 4 c3 Nf6 5 d3; the idea being to develop first and only then carry out the central advance d3−d4. While this approach is hardly ever employed at the highest level (Peter Leko, after having played this system in the recent World Championship tournament in Mexico City against Vladimir Kramnik, went so far as to pronounce the whole opening to be dead!), it is occasionally used by the positional player who likes to avoid all the theory that the Spanish Opening has to offer. In our next game, I'd like to show that, despite all the setbacks it has suffered, the Giuoco Piano is not an entirely lost cause. **1.e4 e5 2.Nf3 Nc6 3.Bc4 Bc5 4.c3 Nf6** In modern times,

this move is almost invariably played at this juncture, as the alternatives have proven to be ineffective.

[Let us quickly check out why: 4...d6? does nothing to prevent White from occupying the centre. After 5.d4 exd4 6.cxd4 Black can choose between two evils:

A) 6...Bb4+ 7.Kf1! Ba5 and now 8.Qa4 , was preferred by the old masters. Black has nothing better than *(* and if that was not already enough, Watson's suggestion of *8.d5 Nce7 9.b4! Bb6 10.Bb2* cannot be denied either *)* 8...Bd7 9.d5 Ne5 *(* or *9...Nd4 10.Qxa5 Nc2 11.Qc3 Nxa1 12.b3 Qf6 13.Bb2* with a clear advantage *)* 10.Qxa5 Nxc4 11.Qc3 Bb5 12.Qxg7 Nd2+ 13.Ke1 Nxf3+ 14.gxf3 Qf6 15.Qxf6 Nxf6 16.Nc3 with advantage for White according to Daniel Harrwitz.;

B) 6...Bb6 7.Nc3 Nf6 *(7...Bg4* usually transposes after *8.Be3 Nf6)* 8.Be3 Bg4 9.Be2 *(9.Bb5* is also good *)* 9...d5 10.e5 Ne4 11.0−0 and White has a comfortable advantage.;

C) 6...−−]

[4...Qf6? only seemingly prevents d2−d4, as White can follow up energetically with 5.d4 exd4 *(5...Bb6* is only marginally better: *6.Bg5 Qg6 7.0−0 d6 8.dxe5* and Black cannot recapture with *dxe5* because of *9.Nxe5! Qxg5 10.Nxf7 Qc5 11.Bd5* and White wins *)* 6.e5! and Black cannot play Nxe5 , because of *(* that leaves *6...Qg6* , but after *7.cxd4* White has complete control of the position *)* 7.Qe2 .]

[4...f5? bears a certain resemblance to the Cordel Gambit in the Classical Ruy Lopez, but with the white bishop being on the Italian diagonal (a2−g8), White quickly gets an advantage with 5.d4! fxe4 *(* or *5...exd4 6.Ng5! d5 7.Bxd5 fxe4 8.Qh5+ g6 9.Bf7+ Ke7 10.Bxg6 Nf6 11.Qh6)* 6.Nxe5 Nxe5 7.Qh5+ Ng6 8.Bxg8 Rxg8 9.dxc5 .]

5.d3

[5.b4 is the Bird Attack, which was first advocated by Philip Stamma and later adopted by the English master Henry Edward Bird. It is not treated extensively in most modern opening encyclopaedias, and is not very popular either. White seeks to gain space on the queenside, but Black can bolster up with Bb6 6.d3 *(6.Qb3 0−0 7.d3 d6 8.a4 a5* is given as equal by von Heydebrand und der Lasa *)* 6...d6 7.0−0 Ne7 8.Nbd2 c6 9.Re1 0−0 10.a4 Ng6 11.a5 Bc7 12.Nf1 d5 13.Bb3 h6 14.Ng3 Be6 15.Be3 Qd7 when he had comfortably equalized in N.Short−V.Salov, Linares 1990.]

5...0−0

[Again there are alternatives: 5...d5? is premature as it runs into 6.exd5 Nxd5 7.Qb3 .]

[5...d6 6.Nbd2 , is an interesting idea, which can be problematic for Black should he play carelessly: for example, after *(6.0−0 0−0* usually transposes to our main game *)* 6...a6 7.Bb3 0−0 *(* Black can wait until White has run out of useful waiting moves: for example, *7...h6 8.h3 Ba7 9.Nf1 Be6* and now White hardly has anything better than *10.Ng3* , but after *d5* Black has equalized *)* 8.h3 Ba7 9.Nf1

d5 10.Qe2 h6 11.g4!? White can, by analogy with Black's approach in the notes to our previous game, initiate a dangerous kingside attack! −−− A good illustration is S.Kofidis−M. Kreuzer, correspondence 1992, which continued dxe4 12.dxe4 Nh7 13.Rg1 Na5 14.Bc2 Re8 15.g5 hxg5 16.Nxg5 Nf8 17.Ng3 Qd6 18.Nh5 Qg6 19.Rg3 with a powerful initiative on the kingside. To nip such ideas in the bud, I recommend delaying castling as well.]

[Last but not least, 5...a6 can also lead to the main line via transposition, but again Black has an interesting idea: 6.0−0 d6 7.Bb3 Ba7 8.h3 h6 (so far play is developing along the main lines) 9.Be3 g5!? 10.Bxa7 Nxa7 11.d4 Qe7 12.dxe5 dxe5 and after playing ...Bd7 and ...0−0−0, Black developed a dangerous kingside attack in I.Khamrakulov−F. Vallejo Pons, Pamplona 2007.]

6.0−0 d6

[Note that 6...d5?! is still weak because of 7.exd5 Nxd5 8.b4! followed by b4−b5.]

7.Bb3 a6 8.Nbd2 Ba7 The position we have reached is a tabiya for the modern treatment of the Giuoco Piano. **9.Nc4** This flexible knight move serves a dual purpose. It makes room for the dark−squared bishop, which can now go to e3 in order to exchange his annoying counterpart, and, what is even more important, it puts pressure on e5, effectively preventing Black from playing ...d6−d5. In my view, this is White's only try for an advantage.

[Alternatively: 9.Re1?! has been brought into disrepute since the discovery of Ng4! . After 10.Re2 Kh8! 11.h3 *(11.Nf1 f5 12.exf5 Bxf5* is even better for Black *)* 11...Nh6 12.Nf1 f5 13.d4 fxe4 14.Rxe4 d5 15.Re1 e4 16.Ng5 Na5 17.f3 Nxb3 18.axb3 c5! 19.fxe4 cxd4 20.cxd4 dxe4 21.Be3 Qd5 Black was better in A.Frois−F.Izeta Txabarri, San Sebastian 1996.]

[As a consequence of the previous variation, 9.h3 was introduced by Anatoly Karpov in his 1981 World Championship match against Viktor Korchnoi. This move indirectly weakens f4 (as White cannot play g2−g3 anymore after ...Nh5), and so Black should immediately take the opportunity to play Nh5! . Then 10.Nxe5?! *(* instead *10.Nc4* is a standard manoeuvre in this kind of position, but after *Qf6 11.Ne3 Nf4 12.Nd5 Nxd5 13.Bxd5 h6* Black had equalized in K.Landa−R. Kasimdzhanov, German League 2006 *)* 10...Nxe5 , runs into 11.Qxh5 Nxd3 12.Nf3 Qf6 13.Bg5 Qg6 14.Qxg6 hxg6 15.Rad1 Nc5 and Black had absolutely no problems in A.Krayz−A.Graf, Groningen 1994.]

9...h6

[In view of the course of this game, 9...Ne7 , with the idea to relocate the knight to g6 and to support an advance of the d−pawn by ...c7−c6, has to be taken into account. Most games with this position have continued 10.Bg5 *(* most likely White should still play *10.Be3 Ng6 11.Bxa7 Rxa7 12.Ne3* and in the game Z. Revesz−V.Vass, Balatonlelle 2001, White was better after *Ra8 13.Re1 Nf4 14.Bc2 Bd7 15.d4)* 10...Ng6

11.Nh4 , but after Kh8 (unpinning the f−pawn in order to make ...h7−h6 possible) 12.Nf5 h6 13.Bxf6 Qxf6 it is not clear if White has anything.]

10.Re1 Be6 11.Be3 Bxe3 12.Nxe3 Qd7 13.Nh4

[13.Bc2 , in order to play d3−d4, is another idea, but the text move would be my personal preference.]

13...Bxb3

[13...d5 is certainly possible, but the simple 14.Qf3! followed by Nh4−f5 is very comfortable for White.

*(*Another idea is *14.exd5 Nxd5 15.Nxd5 Bxd5 16.Nf5 Be6 17.Bxe6 Qxe6 18.Qg4 Qf6 19.Re3*

with yet another example of a white kingside initiative in J.Benade−A. Emarov, correspondence 2004. *)*]

14.Qxb3 b6 15.Nhf5 Kh7 16.Rad1 Rfe8

[Black could try to chase the knight away with 16...g6 , but after 17.Ng3 Rfe8 White could try 18.Rf1!? , with the idea of f2−f4 followed by play on the f−file.]

17.Nd5 Nxd5 18.Qxd5 Rad8 19.d4 The opening phase is complete. White has occupied the centre and can claim a small advantage. **19...Kg8 20.Ne3 b5 21.h3 Ne7 22.Qb3 Qc6 23.d5 Qc5 24.a4!** With his opponent having weakened his queenside, Torre is quick to act. **24...Rf8 25.Qc2 Rb8 26.b4 Qb6 27.Ra1** . Now **27...Ra8 28.Qd3** , keeping an eye on f5, would have been better than 28 c4, which was played in the game. Should Black try to loosen White's grip with 28...c6, White should continue **28...c6 29.dxc6 Qxc6 30.Red1 Rfd8 31.axb5 axb5 32.Rxa8 Qxa8 33.Qxb5 Qxe4 34.Qb6** with a clear advantage. Despite his small inaccuracy, though, Torre eventually went on to convert his advantage.

[34.−− Conclusion: The Giuoco Piano has shown some signs of decay, but it hasn't died of old age just yet. While employing it at the top level is hardly promising anymore, it remains a fairly reliable weapon at club level. And what may be even more important, it still is an instructive opening for all those new to the game. −−− Shock value 1/5, Effectiveness Rating 5/5, Longevity Rating 5/5, Creativity Value 1/5.]

This move is recommended in repertoire books by Emms and Davies, and scores very heavily for Black. The black bishop will later lose a move when White plays d4, but White will first have to play c3 which both hinders his natural development (by Nc3 or b3 and Bb2), and weakens d3. **11.c3** If White is striving for any advantage this is forced.

13.Kh1

[Topalov played 13.d4 A thematic reaction, White parries a flank attack with a central advance.

A) Advancing the ♙g5 was not ideal in the previous notes; even now 13...g4 14.Bh4 Qd7 15.Nh2 *(* Here White can maybe afford even *15.hxg4 hxg4 16.Nh2)* 15...exd4 16.cxd4 Bxd4 *(16...Nxd4 17.Ra3!⩱)* 17.Ra3⩱ *(* or *17.hxg4 hxg4 18.Be2∞* leads to a double−edged position, in which Black's king could end up seriously exposed. *)*;

B) 13...exd4

B1) A suggestion for the future might be 14.cxd4 h4 15.Bh2 Nxd4 *(* Maybe Veselin didn't like *15...g4* , but this is at best unclear after *16.hxg4 Bxg4 17.Be2!? h3 18.d5∞ /±* *)* 16.Nxd4 Bxd4 17.Nf3⩱;

B2) 14.Nxd4

B2a) ≤14...h4?! 15.Nxc6 bxc6 16.Bh2↑ and the ♙a7 is sorely missed on the kingside.;

B2b) Objectively speaking,

possibly the best move was 14...Nxd4!? 15.cxd4 h4 16.Bh2 Bxd4 17.Nf3 *(17.Qh5 Bxb2 18.Rab1 Be5 19.f4⩱ /=)* We have already mentioned this position above, after 17...Bxb2 18.Rb1 Bg7 19.e5 Black should try to return some material to finish his development:

B2b1) 19...dxe5?! 20.Qc2!↻ e4 *(20...Re8? 21.Bxf7+ Kxf7 22.Qxh7±)* 21.Qxe4 Qf6 22.Qe3!?±;

B2c) 14...g4 Now White's ♗ doesn't have the h4 square and So prefers active play to material. Although this aggressive advance will quickly pay off, this was mainly due to Topalov's poor form in London. 15.hxg4?! ☐ **What if... Evans Met Kramnik?,N**

■ **Evans Gambit: Cordel Line,7.Bd3**

Line 363 30.11.2014

[Boris Avrukh]

Current Reputation: Playable for both sides The Evans Gambit has recently been experiencing a resurgence of sorts, and Wei Yi, one of the brightest young stars, has been especially effective with this weapon that is not so surprising anymore. Having that in mind, players of Black would probably appreciate an instant solution for this problem. Enter Kramnik, one of the greatest theoretical giants of all time; his recipe is so straightforward and simple (it is actually an improvement on a 50 years old correspondence game), that almost everyone can adopt it. Without further ado, let's take a look at his game against Halkias from the Qatar Masters Open. **1.e4 e5 2.Nf3 Nc6 3.Bc4 Bc5 4.b4 Bxb4 5.c3 Be7 6.d4 Na5 7.Bd3** I believe that after this game many players of White will probably return to the more common 7. As we're about to see, there are probably several moves that lead to equality after mutually correct play, but

Black has to be careful in most cases. Fortunately for players of Black, Kramnik's idea simplifies their task a great deal. Now that we're familiar with other option, let's compare them to Kramnik's choice. Obviously, White has nothing better than to capture the knight: **12.Nxd7** Promising line for Black: **12...Qxd7!** The key move! In this structure it is useful to have the queen on d1 as it could later go to b3 or in some cases to f3. Compare with If

A) 15...Qe7 16.Qb3 c6 17.d4 Be6 It looks like Black has equalised, but as can often be seen in Magnus' games, small details can become substantial. White has more space on the queenside, and

also ...♘g6 can be said to have slightly less potential than the knight on f3. Even so, Black should be confident about his defence. 18.Bxe6 fxe6 19.Rad1 Rae8 20.Qb4! Putting pressure on d6. exd4 *(20...Rf7 21.dxe5 Nxe5 22.Nxe5 dxe5 23.Qxe7 Rxf1+ 24.Kxf1 Rxe7* of course looks very symmetrical, but White has the idea of marching towards c5 with his king, and Vishy understandably tries to defend more actively. *)* 21.cxd4 e5 A standard move, but leading to a passive ending. But things were already slightly unpleasant. *(*If *21...d5 22.Qxe7 Rxe7 23.Nd2* eyes c5 for the knight,*;* and also *21...Rf7 22.Nd2* keeps some pressure. Maybe not a lot, but annoying and for Black it is difficult to completely equalise. *)* 22.dxe5 dxe5 23.Qxe7 Rxe7 24.Rd6± 1−0 (38) Carlsen,M (2855)−Anand,V (2770) Leuven 2016 A logical move, but it's worth noting that the computer suggests *(24.Kf2!?* simply centralising the king, maybe aiming for the queenside, but also just keeping the tension, while improving his position. Anyhow, nothing is wrong with the text move. *)*;

B) 15...Be6 16.Bxe6 fxe6 17.Qb3 Qc8 18.h4 Nh8 19.d4± White's chances are better despite the almost symmetrical structure.]

13...a5 Black keeps neglecting his development for the sake of strategic moves.

[A simpler way was 13...Ra8 14.a5 Nxe3 15.Qxe3 Qe7]

14.d4 '!' **14...Ra8**

[14...Nxe3 15.Qxe3 b6 highlights White's advance in development after 16.dxe5 dxe5 *(16...Nxe5 17.Nxe5 dxe5 18.Rad1 Qe8 19.b3 Be6 20.Bd5)* 17.Rfd1 Qf6 *(17...Qe7 18.g3)* 18.Qg5 Qxg5 19.Nxg5±]

15.dxe5! A principled decision: the better developed side should open the centre. **15...N4xe5 16.Nxe5 Nxe5 17.Bb3±** White has more space and is better coordinated. Black has no significant weaknesses but needs to act with care. **17...Nd7!?** Anticipating the permanent threat f2−f4 and aiming to trasfer the knight to a better square. But on c5 the knight will not enjoy the desired stability either.

[17...Be6 18.Bd5 Bxd5 19.Qxd5 Nd7±]

18.Bc2 Re8 19.f3 '!' **19...b6?!** To a certain extent the same policy as when Black played ...a6−a5. Black's structure looks nice, but the last move does not help developing the queenside. Moreover, the weakness of the long diagonal will cause him huge problems in the endgame. **20.Rfd1 Nc5 21.b4 Nd7 22.Bb3=** 1−0 (66) Anand,V (2762)−Aronian,L (2786) Moscow 2016

Max Lange Attack
[Yasser Seirawan]

My favorite choice for move four in the Italian Game (**1.e4 e5 2.Nf3 Nc6 3.Bc4 Bc5**) is **4.d4!?** This move starts the 'Max Lange Attack'. I enjoy making this paradoxical sacrifice. Black has geared his development toward controlling the d4−square and undeterred, White places a pawn squarely in Black's jaws. This startling move makes a lot of sense in the Italian Game. With the Evans Gambit and Giuoco Piano, White aims for d2−d4 with a preparatory move, spending a tempo. My attitude: Why waste a move? Black gleefully accepts the offering: **4...exd4** This is the main line of the Max Lange.

[A key alternative is 4...Bxd4 5.Bg5 Nf6 *(5...f6 6.Nxd4 Nxd4 7.Be3 Ne6 8.0−0* completes White's development and gives him a chance to attack with Qd1−h5+ *)* 6.Nxd4 Nxd4 7.f4 d6 8.f5 , in which White has sacrificed a pawn for an annoying bind.]

My opponents usually preferred the main line: **5.0−0 Nf6**

[Once more, Black can avoid the main line by 5...d6 6.c3 dxc3 7.Nxc3 , when White has shed a pawn for a dangerous lead in development.]

6.e5 d5! In many variations of the classical King Pawn openings, this rejoinder is a key counterpunch.

[If Black is forced to move his f6−Knight, disaster strikes quickly: 6...Ng4? 7.Bxf7+ Kxf7 8.Ng5+ Kg8 9.Qxg4 Nxe5 10.Qe4 d6 11.Qd5+ Kf8 12.f4! , when White wins.]

7.exf6 dxc4 8.Re1+ Be6 9.Ng5 This was my early favorite line of opening play. What a joy it was to play this position as White! Black has but one saving move: **9...Qd5!**

[I enjoyed a number of victories after the weaker 9...Qxf6? 10.Nxe6 fxe6 11.Qh5+ g6 12.Qxc5! spears a Bishop.]

[Another bad mistake is 9...0−0? 10.fxg7 Kxg7 *(10...Re8 11.Qh5 Bf5?? 12.Qxf7#* ! *)* 11.Rxe6! White wins a Bishop with a raging attack, and Black can't regain the lost piece by h6? 12.Rxh6! because White's Rook seems to enjoy a charmed life. Every time Black tries to capture the invading Rook, he loses his Queen.]

From here the Max Lange Attack continues: **10.Nc3!** A wonderful move! I derive pleasure from moves where I place my pieces in capture, but they can't be taken. This is life on the edge! In this position, it is a good move; White develops with a gain of tempo. **10...Qf5** The Queen has to move.

[The Knight is quite safe: 10...dxc3?? 11.Qxd5 wins the Queen.]

11.Nce4 0−0−0 Black escapes the center and the Kingside while he has the chance.

Italian game

[Ivanisevic,Ivan]

1.e4 e5 2.Nf3 Nc6 3.Bc4 Bc5 4.c3 Nf6 5.d3 a6 In recent times the Italian game became the most popular of all the 1.e4 e5 openings. The struggle has a profound strategic character, with deep and long manoeuvres, so a stronger player usually prevails. Here we will explore the situations where White can essay g4 (or g5 for Black). These pawn pushes are possible under certain circumstances...

[5...d6 6.Bb3 0−0 7.h3 a6 8.Nbd2 In this position the g4 idea might work if White provokes h6. Therefore, White plays all the useful moves. For example: Be6 *(8...Ba7 9.Nf1 h6* Diagram

[6...Ba7 7.a4 h6 8.Na3 d6 9.Nc2 White is intending to trade the light−squared bishops with 10.Be3, making it less appealing for Black to go for g5 advance. But, Black obtained a very solid position by playing with great precision. Ne7 10.Be3 Ng6 11.Bxa7 Rxa7 12.d4 Bd7= Atlas,Valeri 2435 − Banusz,Tamas 2612, Oesterreich 2017]

7.a4 Over the last year this has been the most popular plan for White. He is not intending to move the b1−knight too soon (delaying the usual d2−f1−g3 or e3 route). Instead, White is expanding on the queenside, and preparing the b4 push while waiting for Black to castle when Bg5 may prove to be a really tricky pin to deal with. The b1−knight may go to a3 and then to c3 or c4.

[10.Qe2!? comes to the same thing after 0−0 11.bxc3 Nxc4 12.Qxc4 Nd6 .]

10...Nxc4 11.Qd4 0−0

[A worthwhile alternative is 11...f5!? 12.Qxc4 d6 13.Nd4 0−0 14.f3 , although Black has to be careful. For example, Nf6 *(* simpler it seems is *14...Nc5! 15.Ba3 b6 16.Bxc5 bxc5 17.Nc6 Qf6 18.Rae1 Bd7 19.Re7 Rf7 20.Rfe1 Raf8!* (a logical improvement on some old games) *21.Rxf7 Rxf7 22.Nxa7 Re7 23.Rxe7 Qxe7 24.Kf2* with an equal position, as in A.Shpak−A.Gavrilov, Vladimir 2004 *)* 15.Bg5! *(15.Re1 h6 16.Rb1 a6 17.Rb2 b5 18.Qd3 Nd7 19.Rbe2 Ne5* led to Black getting the better of the game in A.Zwaig−Y.Kraidman, Havana Olympiad 1966 *)* 15...h6 16.Bh4 g5 17.Bf2 Kg7 18.Rfe1 Bd7 (C.Schlechter−P.Meitner, Vienna 1899) with pressure for the pawn after 19.Re2 followed by doubling on the e−

[White had absolutely no compensation after 15.Bxd6 Qxd6 16.Ng5 Qg6 17.Qxg6 hxg6 18.Rfe1

f6 19.Nf3 Bb7 in A.Kravchenko−I. Otroshenko, Kiev 2000.]
[After 15.Nd4 Re8 16.Rfe1 Bb7 17.Bxd6 Qxd6 18.c4 Ba6 19.Nf5 Qb4 20.Ne3 c6 , Black was ready to seize the initiative in J.Benito Imaz−G.Flear, Basque League 2002.]
15...Qxd4 16.Nxd4 Bb7 17.Bxd6 cxd6 18.Nf5 g6 19.Nxd6 Bxd5 20.Rfe1 Be6 21.f4 a6! Black is somewhat better, Fritz 6−V.Anand, Frankfurt 1999 (see above for the rest of this game).
[21...−− Conclusion: I have played these systems against the Italian and Evans for several years, with good results. Black avoids lots of tricky theory and yet obtains fairly comfortable equality, as well as decent winning chances, with a series of logical moves.]

■ **4.c3 5.d3 − White delays 0−0**

[GM Boris Avrukh]

1.e4 e5 2.Nf3 Nc6 3.Bc4
Guicco Pianno is definitely one of the hottest openings at GM level. No surprise we witnessed a lot of interesting games played in Batumi.
3...Bc5 The alternative **4.d3 Nf6 5.c3 d6** Another popular move order
[5...0−0 is another approach, where Black might think about carrying out d7−d5 in one move.
A) 6.Bg5 h6 7.Bh4 Be7! Another beneficial idea from delaying the d6−move. Recently this position has become quite fashionable 8.Nbd2 d6 9.a4!? Latest fashion in this variation. It's similar to the main lines and the idea is just to save the light−squared bishop, at the same time gaining some space on the queenside. Nh5 Trading dark−squared bishops clearly helps Black. 10.g3!? This akward looking move is actually White's best chance for an advantage. *(10.Bg3 g6* has been proved to be absolutely fine for Black. *)*
A1) 10...g5 fails due to 11.Nxg5!

hxg5 12.Qxh5 Kg7 *(12...gxh4 13.gxh4* leads to quick mate. *)* 13.f4! f6 14.Nf3 and White wins.;

A2) 10...Nf6 So far Black has only played this move. Obviously Black cannot play 11.Bxf6 Bxf6 12.h4! A remarkable concept, now White is trying to exploit the h6−move by hooking up with g4−g5, trying to seize the initiative on the kingside. Ne7N
A solid novelty. Previously Black played the risky 12...h5. 13.Nh2 d5 14.Bb3!? *(* Another approach would be *14.exd5 Nxd5 15.Ng4* but Black should be fine after *c6!)* 14...c6 15.Ng4 Qd6 16.Qf3 Bxg4 17.Qxg4 g6 18.h5 g5 Black equalised comfortably in Anand,V (2771)−Ragger,M (2686) Batumi GEO 2018 even though later Vishy prevailed after showing amazing technique.;

B) 6.0−0

B1) 6...d6 7.Re1 a6 The most common set−up. It goes without saying that Black has other options as well. 8.a4 One of the reasons why Guicco Piano is so popular nowadays is the discovery of a new White concept connected with this move in different versions. Ba7 9.h3 This move has been by far White's major choice in GM games recently. Kh8!?
A very rare idea in this variation, though a popular one in the 3... Nf6 4. d3 Be7 line 10.d4 *(10.Nbd2 Ng8* followed by f7−f5 is Black's main idea, which will be covered in the 4.0−0 move order *)*

B1a) Previously Black played the dubious 10...Nxe4?! 11.Rxe4 d5 Brkic,A (2579) − Henrichs,T (2475) Austria 2017 White should have played 12.Nxe5!N Nxe5 *(12...dxc4 13.Nxc4* is also clearly better for White. *)* 13.Bxd5! and Black hardly has enough compensation for being a pawn down.;

B1b) 10...h6N An obvious novelty, as it's important to cover the g5−square, avoiding both Bg5 and Ng5. 11.dxe5 The endgame appears to be pretty harmless. It's not easy to find a useful move for White with his center under attack. *(* I examined *11.Na3* but Black has a great game after *exd4 12.cxd4 d5 13.exd5 Nxd5;* Most probably *11.a5* deserves some attention. After *Nh7* we are heading to very complicated middlegame. *)* 11...Nxe5 12.Nxe5 dxe5 13.Qxd8 Rxd8 14.Nd2 *(14.Bxf7* runs into the powerful *Nxe4!)* 14...Kg8! very accurate move 15.Nf3 Re8 16.Be3 Bxe3 17.Rxe3 Be6 18.Nxe5 Bxc4 19.Nxc4 Rxe4 20.Rxe4 Nxe4= and Black fully equalised in Anand,V (2771)−Aronian,L (2780) Batumi GEO 2018;

B2) 6...d5 Obviously the alternative is 7.exd5 Nxd5 8.a4

White's top choice recently. So far it hasn't been very successfull for White, and not much changed after two games played in Batumi

B2a) 8...Nb6 9.Bb5 Ne7 10.a5 c6 11.axb6 cxb5 12.Rxa7 Rxa7 13.bxa7 Bxa7 14.Nxe5 Bf5 All this has been played so far in 9 games. Now Bacrot opted for the rarely played 15.Na3 The two White main moves are 15. Be3 and 15. Re1 b4!N

*(*This is accurate and much stronger than the previously played *15...Bb8 16.d4 f6? 17.Nd3* Mamedov,R (2666)−Balogh,C (2614) Baku 2016 this left Black without compensation *)* 16.cxb4 Bb8 Despite being temporarily two pawns down Black's bishop's pair proves to be sufficient to compensate for material deficit. 17.d4 Qd5 18.Re1 Rd8 19.Nf3 Nc6 20.b5 Nb4 21.Qe2 Bd6 22.Qc4 Rc8 23.Qxd5 Nxd5 24.Bd2 f6⩲ and Black's compensation appeared to be sufficient despite the queen's trade Bacrot,E (2678)−Erdos,V (2609) Batumi GEO 2018.;

B2b) 8...a5 Another good option for Black here 9.Re1 Nb6 *(*More popular is *9...Bg4* which recently has been played in several top level games. *)* 10.Bb5 f6 11.Nbd2 Bg4!? In my opinion a very important novelty in this concrete position.

*(*Black has failed to achieve full equality after *11...Na7 12.d4 exd4 13.Ne4 Be7 14.Nxd4 Nxb5 15.axb5* which occured in two games. *)* 12.h3 Bh5 through different move order this position has occured 5 times before this game. 13.Ne4 Bd6

B2b1) 14.Be3 Nd5? This is not a good idea. I can recommend two alternatives *(14...f5* and*; 14...Kh8* in both cases Black's position looks playable. *)* 15.Bc4 Nce7 16.d4 exd4 17.Bxd4± 1/2−1/2 (17) Pourramezanali,A (2509)−Sokolov,I (2642) Guilan 2016 it seems like White offered draw in a clearly better position.;

B2b2) 14.Ng3N Before White tried 14...Bf7 15.d4 This seems like the best moment for White to improve on his play exd4 16.Bxc6 bxc6 17.Qxd4 Bxg3 *(*I don't see any problems if Black maintains the pressure with *17...Re8)* 18.fxg3 Qxd4+ 19.Nxd4 c5 20.Nb5 c6 21.Nd6 Bb3 and everything simplified into draiwsh endgame Vidit,S (2711) −Piorun,K (2612) Batumi GEO 2018]

6.Nbd2 One of several possibilities here [6.Bb3 Here Black came up with the surprising a5!? which is usually played to meet White's a4 move.

7.Nbd2 0−0 8.Nf1 As I mentioned above this is an idea to save a tempo, as after castling White has to play Re1 in order to free the f1−square. Be6 9.Ng3 *(*I believe more challenging is *9.Bg5* In the following relatively recent game Black was unable to equalise *Bxb3 10.axb3 Qe7 11.Ng3 Qe6 12.0−0 h6 13.Bh4!? g5 14.Bxg5 hxg5 15.d4 exd4 16.cxd4↑* 1−0 (38) Tsydypov,Z (2529)−Bykov,E (2346) St Petersburg 2017 *)* 9...h6 10.0−0 Bxb3! 11.axb3 d5 12.Qe2 Re8 13.Bd2 Bf8∓ Black achieved a dream position in Mamedov,R (2699)−Shankland,S (2722) Batumi GEO 2018. Black's pawn is well−placed on a5, potentially fixing White's weak b3−pawn.]

6...a6 7.Bb3 h6 Other popular moves for Black are 7...0−0 and 7...Ba7 **8.Nf1** An idea we witnessed before in different version **8...d5** by far not the most popular, but for sure the most challenging move. **9.exd5!?N**
A new approach.

[All previous game featured 9.Qe2 It would have been interesting to see what Mamedyarov had prepared against it.]

9...Nxd5 10.Ng3 0−0 11.0−0 Black's center is slightly vulnerable, therefore he has to play very accurately. **11...Re8 12.Re1 Nf6 13.h3 Be6 14.Bc2 Bd5 15.Nh4** Another interesting option for White

[15.b4!? Bf8 16.a4]

15...Qd7 16.Nhf5 This looks a bit scary, but Black was able to consolidate his kingside after **16...Bf8 17.f4 Rad8 18.fxe5 Nxe5 19.d4 Ng6 20.Rf1 Qc6!** 1/2−1/2 (43) Duda,J (2739)−Mamedyarov,S (2820) Batumi GEO 2018

■ **Capablanca,JR.**
Hamburg (simul) 1911
[Jacob Aagaard]

This is an important theoretical position, arising after **1.e4 e5 2.Nf3 Nc6 3.Bc4 Bc5 4.c3 Nf6 5.d4 exd4 6.cxd4 Bb4+ 7.Bd2 Bxd2+ 8.Nbxd2 d5 9.exd5 Nxd5 10.0−0 0−0 11.Ne5** . Black can indeed take the d−pawn, but he should be very careful regarding the following lines as they contain a trap! Ripperger: 'White sacrifices his isolated pawn in order to achieve active play for his pieces. ' Ripperger: 'Weiß opfert seinen Isolani, um ein aktives Figurenspiel aufzuziehen. ' **11...Nxd4 12.Nb3** (2 points) White's idea. **12...Nxb3 13.Bxd5** Ripperger: '!' Ripperger: 'Now White offers a rook sacrifice.' Ripperger: 'Jetzt bietet Weiß ein Turmopfer an.'

[After 13.Qxb3 c6 14.Rad1 Qb6 15.Bxd5 cxd5 16.Qxd5 Be6 Black has slightly better prospects.]

13...Nxa1? This might seem forced, but again we have a kind of desperado scenario, similar to the Shirov−Lutz game above, where Black can save himself from trouble by stepping outside the absolutely forcing lines. Ripperger: 'Capablanca accepts this sacrifice too.' Ripperger: 'Capablanca nimmt auch dieses Opfer an.'

[Ripperger: 'However, better is'

Ripperger: 'Besser ist jedoch' 13...Qf6! was the correct move (10 points). The forced line would now continue 14.Bxf7+ *(*or *14.Qxb3 Qxe5 15.Bxf7+ Rxf7* transposing*;* , but not *14.Nxf7? Nxa1!* when White has no compensation *)* 14...Rxf7 15.Qxb3 *(*not *15.Nxf7? Ripperger: 'ist ausgeglichen.' *c5* with an active position − still, White should not lose with accurate play *)* 18.Rxe6 is known to be a draw.]

[13...Qe7!? (8 points). White has the extra option of 14.Re1?! , but this does not appear to be anything special: *(*otherwise *14.Qxb3 Qxe5 15.Bxf7+ Rxf7* transposes to the previous line *)* 14...Nxa1! 15.Bxf7+ *(*after *15.Nxf7 Qf6!* White cannot continue his attack in any meaningful way; e.g. *16.Qxa1 c6 17.Bc4 Bf5* and Black wins *)* 15...Rxf7 16.Nxf7 Be6! 17.Ne5 Bxa2 18.Qxa1 Be6 and it looks as if Black has just won a pawn.]

14.Bxf7+ Ripperger: '!' **14...Kh8**

[14...Rxf7?? 15.Qxd8+]

15.Qh5 Ripperger: 'The threat is simply Ng6 mate. ' Ripperger: 'Es droht einfach Sg6 Matt. ' **15...Bf5?** This loses quite quickly.

[Other options were: 15...g6 16.Qh6 Bf5 17.Bxg6 and White was a pawn up in E.Oudshoorn−A.Hendriks, Dutch Junior Championship 1994.]

[Ripperger: 'After' Ripperger: 'Nach' 15...g5 16.Qh6 Bf5 17.Bg6 Bxg6 *(*or *17...Qe7 18.Bxf5 Rf6 19.Ng6+ Rxg6 20.Bxg6* and White will win the knight on a1 *)* 18.Nxg6+ Kg8 19.Nxf8 Qxf8 20.Qxg5+ Qg7 21.Qd2 Qf6 *(21...Nb3 22.Qd5+ Qf7 23.Qxb7* White should win. sollte Weiß gewinnen. *)* 22.Rxa1 and White should have won in K.Pilgaard−M. Vanderbeeken−G.Flear, Montpellier 2005.]

14...Qf6 15.Qd4

[White had absolutely no compensation after 15.Bxd6 Qxd6 16.Ng5 Qg6 17.Qxg6 hxg6 18.Rfe1 f6 19.Nf3 Bb7 in A.Kravchenko−I. Otroshenko, Kiev 2000.]

[After 15.Nd4 Re8 16.Rfe1 Bb7 17.Bxd6 Qxd6 18.c4 Ba6 19.Nf5 Qb4 20.Ne3 c6 , Black was ready to seize the initiative in J.Benito Imaz−G.Flear, Basque League 2002.]

15...Qxd4 16.Nxd4 Bb7 17.Bxd6 cxd6 18.Nf5 g6 19.Nxd6 Bxd5 20.Rfe1 Be6 21.f4 a6! Black is somewhat better, Fritz 6−V.Anand, Frankfurt 1999 (see above for the rest of this game).

[21...−− Conclusion: I have played these systems against the Italian and Evans for several years, with good results. Black avoids lots of tricky theory and yet obtains fairly comfortable equality, as well as decent winning chances, with a series of logical moves.]

1.e4 e5 2.Nf3 Nc6 3.Bc4 Bc5 4.d3 Nf6 5.c3 The Italian is always trendy. It was always hard for me to have an answer with black as you need to recall many subtle ideas. One approach I try to do in openings is to have a simple idea that work through all the variations or at least to provide the backbone of it all. In this article i'll try to cover the next idea: I want to play a6−Ba7 and then

look for h6−g5. It has already been tried in the +2600 GM level, but I will try to figure out whether we can go through with this idea all the way and when we should do something else. **5...a6 6.0−0**

[6.Bb3 White can choose to play the typical plan with Nbd2−Nf1 without castling. Ba7 7.Nbd2 h6! Since 8. Nf1 runs into 8. ... d5!, it is a bit more precise to play this move order. 8.h3 *(8.Nf1 d5⇄* We will follow with normal moves like castling and Re8. Black is more than fine. *)* 8...d6 9.Nf1 Be6 This is one of the first instances where g5 is a bit too much. White did not castle, not beeing able to win space with g4 is also an issue and white will play Be3 and secure a good knight on e3. 10.Ng3 *(10.Bc2 d5∓* Now we could even consider to follow with Qd6 and long castle, eventually playing g5.*; 10.Be3 Bxe3 11.Nxe3 d5⇄* If we can't go for g5, maybe we can fight the center. Black position looks pretty straightforward to play. *)* 10...Qd7! People who were a bit discouraged after seeing 9. ... Be6, now can be satisfied to consider long castle as a feasible way to play. 11.Qe2 *(11.0−0 Bxh3−+* Woops. Black is winning already.*; 11.Be3 Bxe3 12.fxe3 0−0−0 13.0−0 Bxb3⇄* Like many other instances, we cannot get any benefit from g5, so we look into the center. *)* 11...0−0−0⇄ We could go for 11. ... Bxb3 and then d5, or we could long castle and have fun. White should look for something like 12. Ba4 and then we could follow with b5 and d5. I see this way of playing very appealing to have a complicated game with black.]

6...Ba7 7.a4 This is the most precise move order. White paves the road to achieve space in the queenside while keeping flexbility.

[7.Bb3 d6 8.Nbd2 h6 9.Re1 g5 We kindly remind our visitors that you can always go for Be6 and castle and have a normal italian.

A) 10.Nc4 Bd7! This a very concrete and smart move. White needs to follow up 10. Nc4 with Be3 so we prepare an answer to that. *(10...g4 11.Nfd2 h5 12.Nf1±* White will get to play the desired plan with Be3 and get a knight there. Still 12. ... h4 might be an interesting try, but I feel that black get into trouble as it's very hard to play with a very compromised position without beeing able to keep up with the obvious g3 or h3. *)* 11.Be3 g4 12.Nfd2 12. Nh4 runs into Nxe4. b5! Having the bishop on d7 allows us to play 13. Bxa7 bxc4 and here white cannot go for 14. Ba4! as the knight on c6 is defended. We want to make hard for white to exchange the a7 bishop and put a knight on e3. 13.Na3 Bxe3 14.Rxe3 h5⇄ We would follow with h4−Nh5 and we have a very interesting game ahead. White will lose many tempos to fix the displaced knight on a3.;

B) 10.Nf1 g4 11.N3d2 Nh5 12.Nc4 *(12.g3 Nf6∓* Now we have an easy plan with Nh7−g5 and then go for h5−h4. *)* 12...Nf4 13.Be3 Bd7 We want to follow with Qg5 or Qf6 and then castle. 14.d4 Qf6 15.Qd2 Now castle is impossible due to d5, so first we can annoy

c4's knight. b5 16.Na3 h5⇄
Long castle or h4 will be on the menu. We have a very unbalanced and funny position, with clear strong points in our favour.]

[7.d4 Never forget to check the most natural moves! d6 Just 'works' for black and white is now forced to hold an extended center without an easy way to go for the desired h3−Nbd2−Nf1−Ng3−Bb3−Bc2.]

[7.Bg5 This is the best angle for white to play this Bg5−Bh4 idea. h6 8.Bh4 g5 9.Bg3 d6 10.Nbd2 Qe7
Getting ahead of any d4. Going for Bd7−0−0−0 looks promising. We could also look for Nh7(or Nd7)−Nf8−Ng6.]

7...d6 8.Re1

[8.Na3 h6 9.Nc2 Be6 White did not play h3 and is ready to play Be3 and get the knight on e3, so we need to change for a more usual italian. 10.Bxe6 fxe6 11.Be3 Bxe3 12.Nxe3 0−0⇄ We could follow with Qd7−Rf7−Raf8. Usually this positions are tricky as white wants to play g3−Kg2 and exchange a pair of rooks and look for an eventual d4. But here white has so many lacking tempos: g3, Kg2, h3, Knight missplaced on e3 (better on d2), rook on f1.]

[8.a5 0−0!? After 8. ... h6 white could annoy us with 9. Be3. So we make use of the invested tempo in the queenside to switch the plan to Ne7−Ng6.

A) 9.Bg5 Obviously we have to pay attention to this extra alternative. h6 10.Bh4?! g5 11.Nxg5 *(11.Bg3 Nh7∓* This a great version for black. We have an easy plan with h5, we can follow with Ne7−Ng6 plans or Kh8 and f5. *)* 11...hxg5 12.Bxg5 Kg7−+ White cannot threat anything scary. As a rule of thumb Rh8−Qe7−Be7−Rag8 seems to stop any threat.;

B) 9.h3 Ne7

B1) 10.Re1 Ng6 11.Nbd2 Be6 I really like this precise move order. Now white wants to go for Nf1−Be3. 12.Bxe6 fxe6 13.Nf1 h6 14.Be3 *(14.b4!?* Again white invested so many tempos in the queenside, so we could follow with Rf7−Qd7−Raf8 and create annoyances on the f file. *)* 14...Bxe3 15.Rxe3 c5!
Black gets presence in the center. Usually white would've played b4 before (you read it right yeah :)) so this move is not seeing often. Qe7 and Rc8 should guarantee a peaceful and still interesting position.;

B2) 10.Be3 Bxe3 11.fxe3 b5 We punish the quick a5 with this plan. I love to have plans that rely specifically on white moves, so it's easier to remember. 12.axb6 cxb6⇄ Ng6−Bb7 is a good setup where we are strong in black squares with the pawn structure and the whitesquared black bishop suits very well. We can follow with d5 or b5−a5.;

B3) 10.Bg5 Ng6 11.Nh4 Kh8!∓ Deac missed this chance to play against Van Forrest. Now white will need to be very careful with blacks presence in the f file. Playing h6 and then looking for g5−g4 will be very scary for

white.]
[8.h3 h6 9.Be3□ White needs to be very careful. Other moves would run into the obvious g5−g4. Now it's less appealing to go for g5 without the darksquared bishop and likely having a piece stranded on a7. Bxe3 10.fxe3 Ne7 11.Nh4 Seems like a reasonable approach to annoy our plan. *(11.d4 0−0 12.Nbd2 Ng6⇄* Black is solid and fine. *)* 11...c6 We will follow with d5 and Be6. White can do some very precise threats but it black play is far easier from now on.]
[8.Bg5 h6 9.Bh4 This plans have been very trendy lately, white relys on black overextending and not punishing into the kingside. If we are not careful white eventually will go for d4 and our position will collapse. In this case white will miss the tempo spent on a4 that could've been invested in a more useful move. g5 10.Bg3 Nh7
We did play Nh7 in another line, so it is reasonable to reuse ideas. Here, since we are not castled yet, we would love to play Nf8−Ng6 and completely negate any counterplay on the center while threatening h5−h4. 11.d4 h5 12.h4 This objectively the "best" setup for white, but black is still better with Bg4 or g4. It's not very likely that white looks for this specific position, as black has many other moves besides 10. ... Nh7.]
[8.Nbd2 Against this move white doesn't add anything special to h6−g5 and we likely transpose to the mainlines shown. But we have an extra idea. Nh5!? Nf4 and Qf6 Is a very succesful plan in practice that doesn't have an easy answer. White cannot play 9. Nxe5 as Nxe5 10. Qh5 Bg4! traps the queen.]

8...h6 9.Nbd2

[9.Be3 Bxe3 10.Rxe3 0−0 11.Nbd2 Nh5!? We deviate from the usual structures appearing after Be6. 12.g3 Nf6⇄ We don't need to play Be6 and white position looks a bit silly without it.]

9...g5 10.b4! This is the optimal to play with white. 10. d4 just doesn't work after g4.

[10.Nf1?! This move has been played the same amout of times as 10. b4. Now we get a very pleasing position. g4

A) 11.N3d2 h5

A1) 12.Nb3 White wants to play Be3. g3! This move has an insane winrate for black. Our attack speeds up and white is in clear danger.

A1a) 13.hxg3 Bg4 14.Qc2 h4 15.Be3 *(15.Bg5 hxg3 16.Nxg3 Nh5!!* Was an insane finish 0−1 (28) Nevednichy,V (2498)−Sjugirov,S (2680) Warsaw 2021 *)* 15...Bxe3 16.Nxe3 Kd7!∓ A fantastic idea. We waste no time to send the queen to the kingside. White will have a hard time defending.;

A1b) 13.Nxg3 h4 14.Nf5 Bxf5 15.exf5 Qd7∓ Castle and Rdg8 will be a nightmare to deal with. White knight on b3 is completely out of place.;

A2) 12.Ne3 h4 13.Ndf1 White reallocates the knights and black needs to be decisive. g3!N

Its easier to remember that against 10. Nf1 we will go for g3 all the time.

A2a) 14.fxg3 Bg4 15.Qc2 *(15.Qb3 Kd7!∓* Again this idea shines. Black is close to winning as we threat Na5 aswell. *)* 15...Kd7!∓ White would love to wake up from this nightmare−ish position.;

A2b) 14.hxg3 hxg3 15.Nxg3 Bxe3 16.Bxe3 Ng4 17.Qf3 17. Kf1 just loses after Qf6!. Rh7→ White position is very scary.;

B) 11.Nh4 Nxe4 12.dxe4 Qxh4 13.Be3⇄ Here white has some kind of compensation as our attack seems to be fading out. Since castling long is not very likely as we would expose ourselves to b4−b5, we don't mind losing the right to castle if we can get more tempos. I would suggest to follow with the novelty 13. ... Ne7! and black still has the option to go with Qg5−h5−h4 or just short castle.]

10...Nh7

[10...Nh5 I don't like this move since we don't leave much room for a mistake. The fact that only in one game 11. g3 was played is a bit surprising. Eitherway 11. Nf1 is also very good for white. 11.g3 g4 12.Nh4 Nf4 Now Nf6 to dream for Nh4−Ng5 is way too slow. 13.Rf1 Obvious answer. Qf6 14.Kh1 Obvious answer. Nh3 15.Qe2 Obv...You get now my point. Ne7 16.f3± This was a win in a correspondence game and feels very weird to play with black. 1−0 (37) Marbourg,D (2303)−Dulany,L (2335) ICCF email 2019]

[10...g4? 11.Nh4 Nxe4 12.Nxe4 Qxh4 We get a pawn but white gets inmense counterplay. 13.d4 f5 14.Ng3+− Black position just collapses. I will show an example of one of my students game that shows how exposed black position is. Qf6 15.Nh5 Qe7 16.Nf4 Qg7 17.b5 Ne7 18.dxe5 dxe5 19.Ba3 e4 20.Qd2 g3 21.hxg3 c6 22.Rad1 Bb6 23.Qd6 Rh7 24.Bc5 1−0 (24) Rodriguez Redondo,A (2076)−Ramirez Sanchez, N (1820) chess24.com 2022]

[10...Ng4 Was played by Caruana in the Candidates, but he stated that it was far too risky and basically loses by force. 11.Re2 Qf6 12.Qe1 The main problem I find with 10. Ng4 is that the safe move is also good for white. *(12.d4+−* Just wins as we have e5 ideas and b5 ideas combined. It's not an easy move to play with white though. *)* 12...Qg7 13.Nf1 0−0 14.Ng3 Ne7 15.d4 exd4 16.cxd4 *(16.Bb2!?* Would've been very annoying for black. *)* 16...Nc6⇄ With a very messy position. ½−½ (33) Nepomniachtchi,I (2766)−Caruana,F (2783) Madrid 2022]

11.Kh1! This is the most annoying move. White makes room for the knight and gets away from the a7−g1 diagonal.

[11.Nf1 g4 12.N3d2 Qf6

A) 13.d4N This move is very machine−ish. 0−0 *(13...Ng5 14.Ne3 Ne7!?* Transposes to Ponomariov − Bartel. Looks scary for white aswell but seems that after 15. Ra3! and 16. Kh1! black

will be in trouble. *)* 14.Nb3 exd4 15.cxd4 Nxd4 16.Be3 Nc6
White has a bit of compensation but the secure square on e5 and the natural way in which black pieces develop makes me feel black is okay.;
B) 13.Ne3 Bxe3 14.Rxe3 Ne7
Black attack will scalate quickly after Ng6−h5−Ng5. White doesn't have any obvious counterplay so I would be very happy with black.]

[11.Nb3 g4
A) 12.Nfd2 Qf6 Black play is very straightforward: Ng5−Ne7−h5 are all easy moves. 13.d4
Only reasonable way to counter our plan Ng5 14.b5 Ne7 15.bxa6 bxa6 16.Nf1 h5 17.Qd3 h4!?
We deviate from So−Caruana. *(17...Rg8 18.Bxg5 Rxg5 19.Bxa6* Suddenly our attack fades and the queenside is extremely weak. 1−0 (32) So,W (2770)−Caruana,F (2835) Lichess.org INT 2020 *)* 18.Bxg5 Qxg5 19.Bxa6 h3 20.g3 Bxa6 21.Qxa6 0−0⇄
The combined effect from the diagonal a7−g1 and the weak whitesquared kingside squares makes is very scary for black. We could follow with ed4 and c5! to open the position and get the e5 square for our knight.;
B) 12.b5 This was played by the great theroetician Jaime Santos. 12...Bxf2+ *(12...gxf3 13.Qxf3 Qf6 14.Qxf6 Nxf6 15.bxc6±*
Black position is very bad. Just h3−Kf1 and the pawn structure is awful. Our moves are very simple Rg8, Nf6, Ke7 and white will need to "Carlsen" us.]

11...0−0
[11...Qf6 12.Ng1!**±** Suddenly our plan doesn't make any sense and white will follow with f3 and expansion on the queenside.]
[11...Bxf2 12.Rf1]

12.Rf1 Now Bxf2 was an actual threat.

12...Qf6 Now that white played Rf1 we can play this move. We look for Bg4 and also Ne7−Ng6.
[12...Ne7 13.d4 Ng6 14.Bb3 Qf6 15.Nc4 Bg4 16.Ne3 Bxf3 17.Qxf3 Qxf3 18.gxf3 Nh4 19.Ng2 Nxg2 20.Kxg2 exd4 21.Bb2 Rfe8 22.h4**±** This flawless dynamical way to play for white justifies many move orders I choose for black. If you consider it too flashy for white, you have more room to play with black.]

13.Bb3 Nc4−Ne3 is a very healthy plan.
[13.d4!? Re8 This way we are threatening ed4 in case of Bb3 and now we will follow with Ne7−Ng6. *(13...exd4 14.cxd4 Nxb4 15.a5 Nc6 16.Ra3* Looks very scary for our interests.*; 13...Ne7 14.Bb3*
And Nc4−Ne3 plan is very appealing for white. *Ng6)* 14.Ra3!?
Makes sense to get away from the diagonal and eventually slinding through the third rank to the kingside.

Ne7 15.Ba2 Be6⇄ White setup is a bit too convoluted.]
[13.Ng1 Ne7 14.f3 Kh8 We look for f5. 15.Ne2 Qg7 16.d4 h5⇄
First we can get some good squares with h4 and even look for Nf6−Nh5 so our knight gets to do something or just f5.]

13...Bg4 We start with Bg4 as Ne7 runs into d4!, and now we want to play Ne7−Ng6. **14.Bb2**

[14.Nc4 Ne7 15.Ne3 *(15.Be3 Bxe3 16.fxe3 Qg7⇄* White doesn't make much sense. Knight went to c4 but will need to go back to d2. *)* 15...Bxe3 16.fxe3 Be6⇄ We follow with Qg6 and f5. The position is a success for black.]

14...Ne7 15.Qc2 Ng6 16.Ng1 Rad8⇄ We make room for the bishop on c8 and I feel its easier to play with h5−h4 or Nf4. Black just focuses on the kingside dark squares while white is required to play like a computer to make sense of the technique required to improve his position. I feel white needs to play an insane amount of precise moves to make annoy us and we don't even need to go for g5 in any case. I think I made sense of the move orders and way where white can meddle with our intentions. It's a very ambitious way to play and we can severly punish white mistakes.

A) 12...Be6 A slightly unusual twist. 13.Bc2 h6 14.Nf1 exd4 Hikaru goes for one of the known ways of resolving the tension in the center. *(*It's no longer possible to play *14...d5* right away, because *15.exd5* hits the bishop and Black loses e5. *)* 15.cxd4 d5 *(*No one feels up to *15...c5 16.d5* not after the Kramnik−Carlsen game, Norway Chess 2017. *)* 16.e5 Ne4 17.N1d2

A1) Also possible was 17...Nxd2 18.Bxd2 c5 19.dxc5 *(*The idea to sac on h6, *19.Qc1* can always be dealt with: *Nh4!)* 19...Bxc5 20.Bxg6 fxg6 as 21.Qc2 wins nothing on account of Qb6;

A2) 17...Bf5!? The idea of sacrificing a pawn this way is nothing new, but it has to be carefully considered in every possible situation. 18.Nxe4 dxe4 19.Bxe4 Bxe4 20.Rxe4 Qd5 21.Re1 Rad8 22.Be3 Maxime has a very healthy approach to opening problems − he takes what is given to him and tries to work with it. Thus, his qualified success against the Berlin. Here he realizes his minor pieces are passive, but a pawn is a pawn. c5!? Hikaru doesn't believe in blockade. His plan is to trade some pieces and keep on hitting the e5−pawn. *(22...Ne7 23.b4 Nc6 24.Qc2* and the weakness on c7 doesn't help Black to restore material balance. *)* 23.dxc5 Bxc5 24.Bxc5 Qxc5 25.Qb3 Qd5 26.Qe3 f6? *(26...Nxe5 27.Nxe5 f6 28.f4 fxe5 29.fxe5* Much better interpretation of the same idea was *Re6* and now, with the knights gone from the board Black welcomes *30.Rad1 Qxd1 31.Rxd1 Rxd1+ 32.Kh2 Rd5* with open arms. *)* 27.Rad1!**±** 1−0 (47) Vachier Lagrave,M (2796)−Nakamura,H (2785) Paris 2017 Impeccable timing.;

B) 12...h6 13.Bc2 49 '**±**' looks like a slight edge for White. As a result, White has to move the bishop once again. *(13.a5 c6 14.Bc2 Be6 15.Nf1 Qc7 16.Ng3 Rad8 17.Be3 Qb8 18.Qc1 Qc8 19.Bxh6 Bxh3 20.Bg5 Bg4 21.Bxf6 Bxf3 22.Nf5*+− 1−0 (33) Vachier Lagrave, M (2789)−Khusenkhojaev,M (2455) Tbilisi 2017 *)*

B1) 13...b5

B1a) 14.b4 A logical novelty by Karjakin. White's idea is to play on the queenside with ♗b2, c4. Bb7 15.Bb2 Qd7 16.c4 '±' Karjakin,S − Svidler,P Saint Louis USA 2017 '±' This is the idea of White's setup. Normally it is very rare that White has 5 pawns next to each other on the 4th rank.

B1a1) 16...bxc4 was better, 17.dxe5 Nxe5 18.Nxe5 dxe5 19.Nxc4 Bd4 and Black is also active,;

B1a2) or even the cool−blooded 16...Nh5!? is also possible, for example: 17.axb5 *(17.dxe5? Nhf4! 18.exd6 Nxg2! 19.Kxg2 Nf4+−+* with a decisive attack. *)* 17...axb5 18.c5 Nhf4⇄ with a complicated middlegame.;

B1a3) 16...exd4?! A dubious move, because Black will have problems on b5. 17.cxb5! The right reply! d3?! Another inaccuracy. At first sight 17...d3 is a logical intermediate move, because ...♘f4 will come with tempo. On the other hand the light−squared bishop will be strong on the a6−f1 diagonal. *(*However *17...axb5 18.Nxd4 bxa4 19.Bxa4 c6 20.Qc2±* is also comfortable for White. *)* 18.Bxd3 Nf4 19.Bf1! This is the right square for the bishop. White sacrifices the e4−pawn, because on the queenside he will be stronger. Nxe4 *(19...axb5 20.Bxb5±* is also better for White. *)* 20.Nxe4 Bxe4 21.bxa6 Qf5 Threatening ...♘xh3. 22.Ra3! 1−0 (39) Karjakin,S (2773)−Svidler,P (2749) Saint Louis 2017 A great move, White activates his ♖ from the 3rd rank and protects the f3−knight.;

B1b) 14.Nf1 is the straightforward continuation, 14...Bd7 5:43 15.Ng3 1:53 c5 2:33 16.Be3 19:34 exd4 13:44 17.cxd4 2:59 c4 8:14 18.Qd2 2:58 Bb6 39 19.a5 3:47 Bc7 1:05 20.Bxh6 7:47 gxh6 50 21.Qxh6± 4 ½−½ (34) Grandelius,N (2642)−Hansen, E (2603) Wijk aan Zee 2017;

B2) 13...Nh7 14.dxe5 dxe5 15.Nc4 Qf6 16.Ne3 Ng5 17.Nxg5 hxg5 18.g3 Bxh3 19.Qh5 g4 20.Bd1 Rad8 21.Bxg4 Bxg4 22.Nxg4 Qc6= 1−0 (50) Fedoseev,V (2690)−Beliavsky,A (2589) Minsk 2017;

B3) 13...Bd7 14.a5 Maxime is seizing more space on the q−side. Now White can choose between different possible routes for the ♘d2. *(*The natural *14.Nf1!?* also deserved serious attention. For instance, *c5 15.dxe5 dxe5 16.Ne3 Bc6 17.Qxd8 Raxd8 18.Nf5 Ne7*

19.Ng3! , and Black still has some problems to solve. *)*

B3a) In the event of 14...Qc8 15.Nf1 c5 *(15...Bxh3?* doesn't work: *16.gxh3 Qxh3 17.Qd3*+− , and the attack ends. *)* 16.dxe5 dxe5 17.c4! Bc6 18.N3d2 Nf4 19.Ne3± Black would suffer from the poor ♙a7.;

B3b) After 14...Nh5 15.Nf1 Nhf4 16.Ng3 Qf6 17.Be3± Black's activity on the k−side is only visual.;

B3c) 14...c6 15.dxe5 dxe5 16.Nc4 Now the vulnerablity of the dark squares in Black's camp cannot be underestimated.

B3c1) Possibly, a more accurate move was 16...Qc7!? , intending to meet 17.Qd6 with Qc8! 18.Qd3 Qc7 *(18...Bxh3 19.Nh2! Be6 20.Nd6 Qc7 21.Nxe8 Rxe8±)* 19.Be3 Bxe3 20.Qxe3 Be6± , and Black is only slightly worse.;

B3c2) 16...Qe7 17.Qd6 Qxd6 '?!' This is a serious concession − the penetration of White's knight would cause Wesley serious problems.

(A much better try was *17...Qd8! 18.Be3 Bxe3 19.Nxe3 Be6 20.Qxd8 Rexd8 21.Rad1 Kf8±)* 18.Nxd6 Re6 19.Rd1± and Black was under pressure. Rb8 20.Kf1 Maxim isn't in a rush.

(Another promising way of handling the position was *20.b4!? Re7 21.c4 Be6 22.Bb2±* , slowly squeezing the opponent's pieces. *)* 20...Re7 21.Nc4 Rbe8 22.b3 Be6

B3c21) A much stronger move was 23.Ba3! '±!?' '±!?' Bxc4+ 24.bxc4 Rd7 25.Rxd7 Nxd7 26.Rb1 b5 *(26...Bc5 27.Rxb7 Bxa3 28.Rxd7±)* 27.Rd1 Nf6 28.Rd6±;

B3c22) 23.Nb6?! An unsuccessful decision − in the resuting closed position White would hardly benefit from having the bishop pair. 23...Bxb6 24.axb6 Rd7 25.Be3 Rc8! GM So manages to fully consolidate. 26.c4 *(26.Ne1 Rxd1 27.Rxd1 c5 28.c4 Nd7 29.Nd3* would lead to the same. *)* 26...Rxd1+ 27.Rxd1 c5 28.Ne1 1−0 (43) Vachier Lagrave,M (2791)−So,W (2810) Saint Louis 2017;

B4) 13...c6 didn't offer Black full equality in the following top−level encounter: 14.Nf1 d5 *(14...exd4 15.cxd4 c5 16.d5 b5 17.axb5 axb5 18.Ng3 Bd7 19.Be3 Bb6 20.Rxa8 Qxa8* 1−0 (40) Kramnik,V (2808)−Carlsen,M (2832) Stavanger 2017 with an unclear

middlegame; later White managed to win. *)* 15.Nxe5 Nxe5 16.dxe5 Nxe4 17.Bxe4 dxe4 18.Qxd8 Rxd8 19.Ng3 *(19.Be3±)* 19...Bb8 20.Be3 Bxe5 ½−½ (34) Anand,V (2770)−Aronian,L (2792) Saint Louis 2016]

[11.d4

A) 11...c6 Now White has to reckon with d6−d5. Interestingly Karjakin and So played this position with reversed colors previously −

A4a) 12...a5 This move is questionable, as the a5−pawn might become weak after ♘d2−c4. 13.dxe5! Chapter 6 − 4.0−0

[GM Mihail Marin]

1.e4 e5 2.Nf3 Nc6 3.Bc4 d6 4.0−0
This flexible move may be the most challenging. White invites his opponent to display his cards. **4...Be7** The logical continuation and no less flexible than White's last move.
[We already know that 4...g6 5.d4 exd4 6.Nxd4 Bg7 7.Nxc6 bxc6 8.Nc3 is pleasant for White.]
[4...Nf6? runs into 5.Ng5±]

5.d4 Occupying the centre is equally unpromising as one move earlier.
[The natural 5.d3 runs into Na5 , immediately yielding Black a good position. 6.Re1 *(6.Bb5+ c6 7.Ba4 b5 8.Bb3 Nf6 9.Nbd2 0−0 10.Re1* Mohammad,M (2281) −Abdulla,A (2464) Dhaka 2021 (½−½, 53) *Nxb3 11.axb3 a5 12.Nf1 c5∓* Zaksaite,S (2202) −Galego,L (2483) Chess.com INT 2021 (0−1, 31)*; 6.Bb3 Nxb3 7.axb3 f5 8.Nc3 Nf6∓; 6.a4 Nxc4 7.dxc4* Das,A (2482) −Shalamberidze, A (2333) Albena 2012 (½−½, 76) *f5 8.Nc3 Nf6∞; 6.Nc3 Nxc4 7.dxc4 f5!?N 8.c5 Nf6 9.cxd6 cxd6 10.exf5 Bxf5 11.Bg5 Qd7 12.Qd2 0−0 13.Rad1 Rad8= 14.Bxf6 Bxf6 15.Nd5 Bg4 16.Qd3 Be7=)* 6...Nxc4 7.dxc4 g5!? [5.Re1 g5!?N If Black intends to keep the game within independent paths with respect to the 3...Nf6 4.d3 Be7 line is the move to be played. *(5...Nf6* is likely to transpose to the aforementioned line. *)* 6.d4
The principled reaction. "An attack on the wing should be answered in the centre!" *(6.d3 g4 7.Nfd2 h5 8.Nc3 Bg5=)* 6...g4 7.d5 Na5 8.Nfd2 Nxc4 9.Nxc4 f5 Black has good counterplay. 10.exf5 Bxf5 11.Na5 *(11.Nc3 Qd7 12.Ne3 h5 13.Nxf5 Qxf5 14.Ne4 Nf6=)* 11...Qd7 12.c4 *(12.Nxb7 Qb5−+* traps the knight. *)* 12...h5!? 13.Nxb7 g3! A typical way of speeding up the pawn attack. In Sicilian lines with opposite castles, White frequently plays g5−g6 with the reserve pawn on h4, while Black has ...

b4−b3 followed by ...a5−a4. 14.fxg3 *(14.hxg3 h4↑ 15.gxh4? Bxh4 16.Nc3 Qh7−+)* 14...h4↑ 15.gxh4? Bxh4 16.Rf1 *(16.g3 Bxg3 17.hxg3 Qh7−+)* 16...Nf6 17.Nc3 Rg8 18.Qe2 Qh7−+]

[5.c3 is examined in Line 7.]

[For 5.a4 see Line 8.]

5...Nf6 6.d5 Maintaining the tension or exchanging on e5 are inoffensive. The main move is familiar to us, having more of practical value. Objectively, Black should have no problems, but he needs to know what he is doing. Unlike in the previous lines with ...g7−g6, the knight does not have the e7−square for retreating.

[6.Nc3 runs into Bg4 7.dxe5 *(7.d5 Nd4 8.Be2 Nxe2+ 9.Qxe2 0−0 10.h3 Bd7=)* 7...Bxf3! Now is a good moment for this exchange. Black would choose a way of taking on e5 depending on White's answer 8.Qxf3 *(8.gxf3 dxe5=)* 8...Nxe5 9.Qe2 Nxc4 10.Qxc4 0−0 11.Bf4 The position is typical for the Steinitz Defence in Ruy Lopez. After exchanging a few minor pieces, Black can organize his counterplay more easily. Re8!N It is strange that this typical move is a novelty. 12.Rad1 *(12.e5 dxe5 13.Bxe5 c6 14.Rad1 Qb6=)* 12...Bf8 13.Rfe1 *(13.e5 Nh5 14.exd6 Nxf4 15.d7 Qg5 16.g3 Red8 17.Qxf4 Qxf4 18.gxf4 Bd6=)* 13...c6 14.e5 d5 15.Qb3 Qc7=]

[6.dxe5 is offensive. Nxe5! With the knight on f6, this is possible and quite good. Black clears the path for the c−pawn, which would later allow him to activate the dark−squared bishop. A big difference with respect to 3...Be7 4.d4 d6 5.dxe5 dxe5. 7.Nxe5 dxe5 8.Qxd8+ *(8.Qe2 c6 9.Nd2 0−0 10.a4 Qc7N 11.a5 Bg4 12.f3 Bd7 13.Nb3 b5 14.axb6 axb6=)* 8...Bxd8= The position is just equal. 6...Nb8 The fact that the knight had to retreat to the initial square is a small achievement for White. However, he is not in time to consolidate, since e4 is hanging and the bishop is slightly misplaced on c4. **7.Nc3** The attempt to build up a King's Indian centre with

[7.Bd3 Nbd7 8.c4 runs into Nc5 SInce the pawn on e4 is hanging, White is not in time to keep his bishop with Bc2. 9.Nc3 Nxd3 This exchange solves Black's space problems. 10.Qxd3 0−0 11.Nd2 Nh5 12.g3 Bh3! *(12...g6* is sound but a bit slow. *13.b4 f5⇄* Anand,V (2786) −Ivanchuk,

7...0−0 It is useful to compare this position with the Philidor defence. One may argue that White has gained two tempi due to the forced retreat of the black knight. At the same time, in the Philidor White rarely plays d4−d5. This is a typical reaction in a position with ... Nbd7 and ... c7−c6 after Black plays ... b7−b6, weakening the light squares.

8.Re1
[8.a4 is premature since after a5 the knight could go to a6 and maybe to b4.]
[8.h3 c6 does not make much of a difference concerning the main line.]

8...Nbd7 9.a4 c6 We are getting closer to the Philidor patterns, with the difference mentioned above: Black has not played ...b7−b6. Therefore, dxc6 is never a threat and Black aims at playing ...Nb6 followed by an exchange on d5.

10.a5
[10.Be3 Nb6 11.Bb3 cxd5 12.exd5 a5=]
[10.Bf1 a5!? followed by ...Nb6.]

10...b5 11.axb6 Nxb6 Black has apparently spoiled the flexibility of his structure, but also gained time for carrying out his plan. **12.Bf1**

The Giuoco Piano in the Modern Era: From the beginning of the 19th Century, opening theory began to develop at an accelerated tempo, and ways and means were found to oppose the Giuoco Piano, rendering it rather harmless. Indeed, players turned their attention to other openings, most notably the King's Gambit and the Evans Gambit. By the beginning of the 20th Century the Giuoco Piano had virtually vanished from tournament play, and even though there have been several attempts to find improvements (see Chapter 35), it seems that the Giuoco Piano in its original form can be shelved. −−− Nowadays the only way for White to fight for an opening advantage seems to be a calm approach involving 4 c3 Nf6 5 d3; the idea being to develop first and only then carry out the central advance d3−d4. While this approach is hardly ever employed at the highest level (Peter Leko, after having played this system in the recent World Championship tournament in Mexico City against Vladimir Kramnik, went so far as to pronounce the whole opening to be dead!), it is occasionally used by the positional player who likes to avoid all the theory that the Spanish Opening has to offer. In our next game, I'd like to show that, despite all the setbacks it has suffered, the Giuoco Piano is not an entirely lost cause. **1.e4 e5 2.Nf3 Nc6 3.Bc4 Bc5 4.c3 Nf6** In modern times, this move is almost invariably played at this juncture, as the alternatives have proven to be ineffective.

[Let us quickly check out why: 4...d6? does nothing to prevent White from occupying the centre. After 5.d4 exd4 6.cxd4 Black can choose between two evils:

A) 6...Bb4+ 7.Kf1! Ba5 and now 8.Qa4 , was preferred by the old masters. Black has nothing better than *(* and if that was not already enough, Watson's suggestion of *8.d5 Nce7 9.b4! Bb6 10.Bb2* cannot be denied either *)* 8...Bd7 9.d5 Ne5 *(* or *9...Nd4 10.Qxa5 Nc2 11.Qc3 Nxa1 12.b3 Qf6 13.Bb2* with a clear advantage *)* 10.Qxa5 Nxc4 11.Qc3 Bb5 12.Qxg7 Nd2+ 13.Ke1 Nxf3+ 14.gxf3 Qf6 15.Qxf6 Nxf6 16.Nc3 with advantage for White according to Daniel Harrwitz.;

B) 6...Bb6 7.Nc3 Nf6 *(7...Bg4* usually transposes after *8.Be3 Nf6)* 8.Be3 Bg4 9.Be2 *(9.Bb5* is also good *)* 9...d5 10.e5 Ne4 11.0−0 and White has a comfortable advantage.;

C) 6...−−]

[4...Qf6? only seemingly prevents d2−d4, as White can follow up energetically with 5.d4 exd4 *(5...Bb6*

is only marginally better: *6.Bg5 Qg6 7.0−0 d6 8.dxe5* and Black cannot recapture with *dxe5* because of *9.Nxe5! Qxg5 10.Nxf7 Qc5 11.Bd5* and White wins *)* 6.e5! and Black cannot play Nxe5 , because of *(*that leaves *6...Qg6* , but after *7.cxd4* White has complete control of the position *)* 7.Qe2 .]

[4...f5? bears a certain resemblance to the Cordel Gambit in the Classical Ruy Lopez, but with the white bishop being on the Italian diagonal (a2−g8), White quickly gets an advantage with 5.d4! fxe4 *(*or *5...exd4 6.Ng5! d5 7.Bxd5 fxe4 8.Qh5+ g6 9.Bf7+ Ke7 10.Bxg6 Nf6 11.Qh6)* 6.Nxe5 Nxe5 7.Qh5+ Ng6 8.Bxg8 Rxg8 9.dxc5 .]

5.d3

[5.b4 is the Bird Attack, which was first advocated by Philip Stamma and later adopted by the English master Henry Edward Bird. It is not treated extensively in most modern opening encyclopaedias, and is not very popular either. White seeks to gain space on the queenside, but Black can bolster up with Bb6 6.d3 *(6.Qb3 0−0 7.d3 d6 8.a4 a5* is given as equal by von Heydebrand und der Lasa *)* 6...d6 7.0−0 Ne7 8.Nbd2 c6 9.Re1 0−0 10.a4 Ng6 11.a5 Bc7 12.Nf1 d5 13.Bb3 h6 14.Ng3 Be6 15.Be3 Qd7 when he had comfortably equalized in N.Short−V.Salov, Linares 1990.]

5...0−0

[Again there are alternatives: 5...d5? is premature as it runs into 6.exd5 Nxd5 7.Qb3 .]

[5...d6 6.Nbd2 , is an interesting idea, which can be problematic for Black should he play carelessly: for example, after *(6.0−0 0−0* usually transposes to our main game *)* 6...a6 7.Bb3 0−0 *(*Black can wait until White has run out of useful waiting moves: for example, *7...h6 8.h3 Ba7 9.Nf1 Be6* and now White hardly has anything better than *10.Ng3* , but after *d5* Black has equalized *)* 8.h3 Ba7 9.Nf1 d5 10.Qe2 h6 11.g4!? White can, by analogy with Black's approach in the notes to our previous game, initiate a dangerous kingside attack! −−− A good illustration is S.Kofidis−M. Kreuzer, correspondence 1992, which continued dxe4 12.dxe4 Nh7 13.Rg1 Na5 14.Bc2 Re8 15.g5 hxg5 16.Nxg5 Nf8 17.Ng3 Qd6 18.Nh5 Qg6 19.Rg3 with a powerful initiative on the kingside. To nip such ideas in the bud, I recommend delaying castling as well.]

[Last but not least, 5...a6 can also lead to the main line via transposition, but again Black has an interesting idea: 6.0−0 d6 7.Bb3 Ba7 8.h3 h6 (so far play is developing along the main lines) 9.Be3 g5!? 10.Bxa7 Nxa7 11.d4 Qe7 12.dxe5 dxe5 and after playing ...Bd7 and ...0−0−0, Black developed a dangerous kingside attack in I.Khamrakulov−F. Vallejo Pons, Pamplona 2007.]

6.0−0 d6

[Note that 6...d5?! is still weak because of 7.exd5 Nxd5 8.b4! followed by b4−b5.]

7.Bb3 a6 8.Nbd2 Ba7 The position we have reached is a tabiya for the modern treatment of the Giuoco Piano. **9.Nc4** This flexible knight move serves a dual purpose. It makes room for the dark−

squared bishop, which can now go to e3 in order to exchange his annoying counterpart, and, what is even more important, it puts pressure on e5, effectively preventing Black from playing ...d6−d5. In my view, this is White's only try for an advantage.

[Alternatively: 9.Re1?! has been brought into disrepute since the discovery of Ng4! . After 10.Re2 Kh8! 11.h3 *(11.Nf1 f5 12.exf5 Bxf5* is even better for Black *)* 11...Nh6 12.Nf1 f5 13.d4 fxe4 14.Rxe4 d5 15.Re1 e4 16.Ng5 Na5 17.f3 Nxb3 18.axb3 c5! 19.fxe4 cxd4 20.cxd4 dxe4 21.Be3 Qd5 Black was better in A.Frois−F.Izeta Txabarri, San Sebastian 1996.]

[As a consequence of the previous variation, 9.h3 was introduced by Anatoly Karpov in his 1981 World Championship match against Viktor Korchnoi. This move indirectly weakens f4 (as White cannot play g2−g3 anymore after ...Nh5), and so Black should immediately take the opportunity to play Nh5! . Then 10.Nxe5?! *(* instead *10.Nc4* is a standard manoeuvre in this kind of position, but after *Qf6 11.Ne3 Nf4 12.Nd5 Nxd5 13.Bxd5 h6* Black had equalized in K.Landa−R. Kasimdzhanov, German League 2006 *)* 10...Nxe5 , runs into 11.Qxh5 Nxd3 12.Nf3 Qf6 13.Bg5 Qg6 14.Qxg6 hxg6 15.Rad1 Nc5 and Black had absolutely no problems in A.Krayz−A.Graf, Groningen 1994.]

9...h6

[In view of the course of this game, 9...Ne7 , with the idea to relocate the knight to g6 and to support an advance of the d−pawn by ...c7−c6, has to be taken into account. Most games with this position have continued 10.Bg5 *(* most likely White should still play *10.Be3 Ng6 11.Bxa7 Rxa7 12.Ne3* and in the game Z. Revesz−V.Vass, Balatonlelle 2001, White was better after *Ra8 13.Re1 Nf4 14.Bc2 Bd7 15.d4)* 10...Ng6 11.Nh4 , but after Kh8 (unpinning the f−pawn in order to make ...h7−h6 possible) 12.Nf5 h6 13.Bxf6 Qxf6 it is not clear if White has anything.]

10.Re1 Be6 11.Be3 Bxe3 12.Nxe3 Qd7 13.Nh4

[13.Bc2 , in order to play d3−d4, is another idea, but the text move would be my personal preference.]

13...Bxb3

[13...d5 is certainly possible, but the simple 14.Qf3! followed by Nh4−f5 is very comfortable for White. *(* Another idea is *14.exd5 Nxd5 15.Nxd5 Bxd5 16.Nf5 Be6 17.Bxe6 Qxe6 18.Qg4 Qf6 19.Re3* with yet another example of a white kingside initiative in J.Benade−A. Emarov, correspondence 2004. *)*]

14.Qxb3 b6 15.Nhf5 Kh7 16.Rad1 Rfe8

[Black could try to chase the knight away with 16...g6 , but after 17.Ng3 Rfe8 White could try 18.Rf1!? , with the idea of f2−f4 followed by play on the f−file.]

17.Nd5 Nxd5 18.Qxd5 Rad8 19.d4 The opening phase is complete. White has occupied the centre and can claim a small advantage. **19...Kg8 20.Ne3 b5 21.h3 Ne7 22.Qb3 Qc6 23.d5 Qc5 24.a4!** With his opponent having weakened his queenside, Torre is quick

to act. **24...Rf8 25.Qc2 Rb8 26.b4 Qb6 27.Ra1** . Now **27...Ra8 28.Qd3** , keeping an eye on f5, would have been better than 28 c4, which was played in the game. Should Black try to loosen White's grip with 28...c6, White should continue **28...c6 29.dxc6 Qxc6 30.Red1 Rfd8 31.axb5 axb5 32.Rxa8 Qxa8 33.Qxb5 Qxe4 34.Qb6** with a clear advantage. Despite his small inaccuracy, though, Torre eventually went on to convert his advantage.

[34.−− Conclusion: The Giuoco Piano has shown some signs of decay, but it hasn't died of old age just yet. While employing it at the top level is hardly promising anymore, it remains a fairly reliable weapon at club level. And what may be even more important, it still is an instructive opening for all those new to the game. −−− Shock value 1/5, Effectiveness Rating 5/5, Longevity Rating 5/5, Creativity Value 1/5.]

9.Nc2

[9.Be2?! gives us another chance to whack the Knight. The exchange Bxa3 10.Bxa3 d6∓ looks heavily in Black's favor.]

[Instead 9.Bg5 Qg6 10.Nc2 0−0∞ is very much like the 8...b6 lessons in this chapter.]

9...0−0 10.Ne3 It is important to note that whenever this Knight reaches e3 White is threatening a Queen trap.

10...Ng6

[For example 10...b5?? 11.Ng4 Qg6 12.Nh4 The Queen trap. Qxe4 13.f3 winning.]

[Otherwise there is 10...h6 The stance here adopted by Black, with both wing pawns up a square, is a common feature of the 7...h6 [/course/80564/15] section; it's not good, e.g. 11.Ng4 Qg6 12.Nh4 Qh7 13.Bd3 Qh8± is a strange sequence, but stranger still is White's meager +0.50 rating.]

11.Nf5

[11.a4 h6± could transpose below; compare the 7...h6 [/course/80564/15] section. But if instead]

[11.Ng4?! then Qd8∞ is equal − the strong point holds!]

11...h6 12.a4!

[This multi−purpose move also enables a later Bc1−a3 attack. Others: 12.Rb1 takes the half−open file − a pressure move, a waiting move. Nge7 To question that Knight on the f5 square. 13.Nxd6 Qxd6 14.dxe5 Qxd1 15.Rxd1 Ng6∞ Black has a fine game with better structure, not to mention that silly question of material!]

[Taking 12.Nxd6!? Qxd6∞ is also good for Black, who intends ... Qd6−f6 next then ...d7−d6 with somewhat better chances.]

12...Nge7

[A normal developing move like 12...Re8 runs into 13.g4! This attacking charge is worth remembering. Nf4 14.Bxf4 exf4 15.e5 Nxe5 16.dxe5 Bxe5 17.Nxe5 Rxe5 18.Re1 d6 Black seems to have survived the worst of it, but continuing 19.Rxe5 dxe5 20.Qd5 Rb8 21.Re1 Be6 22.Qc5± reveals White to have a clear advantage.]

13.Nxd6 Qxd6

[The pawn formation 13...cxd6?! doesn't work out here − Black's Queenside pawns should be at a7 and b6 , not b7 and a6 . 14.Re1 $16]

14.Ba3! Of course, and very strong too.

[If instead 14.Ba2?! Qf6 15.d5 Rather than face 15...d6 from his opponent, White decides to get there himself. Na5 16.d6 cxd6 17.Ba3 d5! 18.Bxd5 Re8∞ with unresolved issues.]

[Or if 14.dxe5?! Qxd1 15.Rxd1 The exchange of Queens takes off a lot of pressure. Ng6 16.Bd5 Re8∞ Black will call in the extra pawn he loaned with good chances.]

14...Qf6 15.dxe5 Nxe5 16.Nxe5 Qxe5 17.f4 Qxe4

[Black is unwilling to face 17...Qxc3?! 18.Bxe7 Re8 19.Bxf7+! Kxf7 20.Bh4!± Nicely done, ensuring a clear advantage.]

18.Ba2 White continues his long, slow burning attack. **18...Nc6 19.Bxf8 Kxf8 20.f5**

[That looks dangerous, and 20.Re1± is good too − White is up a full pawn in bot−speak either way. Look, nobody said you could just play anything in this opening!]

20...Qe3+ 21.Kh1 Qg5 22.f6

The wall of the citadel will break apart.

22...gxf6 23.Qb3 Qg6 24.c4±

Black has 3 pawns and a Knight for his Rook, but White enjoys an enduring initiative. The Silicon Savant credits White with a +1.15 edge.

B1) 13.Bg5± Qe8 is another way to prepare the f5−break. 14.Bxh6 *(14.Qd2 f4)* 14...gxh6 15.d4 Qg6 This is a better moment to play it. As a matter of principle, we should open the centre because our pieces are well−positioned for it. 16.exf5 Bxf5 In this position, nothing really stops us from continuing with a standard plan of the queenside expansion: 17.Nh4 The issue with the e5−f5 pawn duo is that they are the strongest in their current formation. However, as soon as one pawn moves forward, a huge weakness arises on the neighbouring squares. For example, Qf6 18.Nxf5 Qxf5 19.Ne3± A complex middlegame lies ahead. White's superior piece coordination gives him better chances. or Qg5?!;

In this case, we can get a favourable transformation with *)* 21...dxe4± Black will surely have some compensation due to the kingside attack prospects. White's extra pawn is not on schedule to make an impact soon, so our advantage is not large here. 22.Nxe4!? might be a more accurate move order as it avoids complications in the 10...a4 line (see below) , while keeping good chances to eventually transpose into the main line after a subsequent a3, b3, etc. Ultimately, it's probably not a big issue, but it's good to be aware of it. but let's also consider a few alternatives: Qg6+;
B5c) 16.Ne3 Bd7 ½−½ (50) Paravyan, D (2629) −Murzin, V (2502) Cheboksary 2021 when Black could simply decline the trade with 17.Nd2!?∞ *(17.Nh2 Qg7 18.Kh1!* Black has only one way to defend both pawns, *Rab8* Nevertheless, we get the upper hand with *)* 17...Rab8!? is an interesting attempt to complicate matters early. 18.Bf3 Ne7]

[11.axb3 d5]

11...Qd7 The most natural continuation. **12.Nf1** White is ready for the queenside break. We can see how well−placed the bishop is on c2, as it simultaneously controls key squares like b3, a4, and e4. **12...Rfe8** Black delays b3−b4 for a moment with this typical queen move. However, it has some downsides, as well. **13.Bg5** A useful prelude to our queenside play. The queen will not feel comfortable on e8 while being x−rayed by the white rook.

[13.Be3!± White can also get an edge with a more straightforward Bxe3 14.Nxe3 a5 15.a4 Ne7]

A good response by Karjakin. Noting the slight fragility in White's position, he prepares to play actively in the centre himself. 12.h3 It's unfortunate that White has to play another non−developing move, but *(12.Nf1* is strongly met by *Bg4* White has not achieved any advantage from the opening. *)* 12...exd4?! European Youth Ch., Greece 199 1999

[Paul Motwani]

G12.11: "Same young story!" B.Heberla−I.Cheparinov, European Youth Championship, Greece 1999. Two Knights Defence. Nowadays there are so many extremely young yet really strong chessplayers who already play like experienced masters, that the middle word in the phrase 'Same old story' needs changing to 'young'! One of my favourite games which gives an emphatic demonstration of powerful, energetic, youthful play is the following encounter from the Boys Under−14 section of last year's European Youth Championships in Greece. I love the elegant flowing style of White's play, which is a beautiful blend of perfectly−timed manoeuvres and tactics. You'll find that all the key ideas present in the game below are covered along with numerous other important themes in GM Joe Gallagher's very useful new GAMBIT book, "101 Attacking Ideas in Chess". **1.e4 e5 2.Nf3 Nc6 3.Bc4 Nf6 4.d3**

[White chooses not to go for immediate sharp complications with 4.Ng5 which can be answered by d5 *(* or even the ultra−wild *4...Bc5)*]

4...h6

[Black is preparing to play ...g6 instead of doing that move right now, because 4...g6?! 5.Ng5 is awkward.]

5.0−0

[G12.11.1: The tame retreat 5.Bb3 let Black quickly obtain an excellent active position via g6 6.c3 Bg7 7.0−0 0−0 8.Re1 d5! in the game P. Bex−R.Berzinsh at the 1999 Ambassador Open in Bern, Switzerland.]

5...d6

[Black may well have feared the line 5...g6 6.d4!? with ideas like exd4 *(* or *6...d6? 7.dxe5 Nxe5? 8.Nxe5 dxe5 9.Bxf7+!)* 7.e5 Now, though, after 5...d6, White must watch out for his opponent harassing the c4−bishop with ...Na5, since Black no longer

needs the knight on c6 to protect the e5−pawn.]

6.c3 This move prepares the central advance d3−d4, while also making room at the c2−square for White's light−squared bishop to complete the manoeuvre Bc4−b5−a4−c2 if it gets chased by ...Na5. **6...g6 7.d4**

[7.Re1 Bg7 8.a4 0−0 9.a5 Rb8! followed by ... b5 was fine for Black in the clash B.Belotti−V.Malaniuk at the 1999 European Team Championship in Batumi, Georgia−−−see game G12. 9.]

7...Qe7

[7...Nxe4 is clearly highly dangerous for Black when most of his pieces are not properly developed, and his king, in particular, is still sitting on the e−file.]

8.Re1 Bg7 9.Nbd2 0−0 10.h3 The main function of this prophylactic measure is that it prevents Black from playing the pinning move ...Bg4.

10...Nh5 11.Nf1 Qf6? This actually worsens the position of Black's queen, because after the forthcoming move 12 Ne3, White then threatens 13 Ng4 as well as 13 Nd5. **12.Ne3! Ne7**

[A simple yet important point detail associated with White's strong twelfth is that 12...exd4 can be met by 13.Nd5]

[12...Nf4 13.Nd5 Nxd5 14.exd5 leaves Black in double trouble at c6 and e5. However, in the actual game, White demonstrates a practically forced win from this point onwards!]

13.Ng4! Bxg4 14.hxg4 Nf4 15.g3 Ne6 16.d5! Ng5

[16...Nd8? loses instantly to 17.g5 hxg5 18.Bxg5 trapping Black's unhappy queen.]

17.Nxg5 hxg5 18.Kg2 White gets ready to slide his e1−rook across to the freshly opened h−file. He is also preparing to play Be3 and Qd2 without allowing ...Qf3 by Black. **18...Bh6 19.Rh1 Kg7 20.Be3 Rh8**

[20...Ng8 does not help either, in view of 21.Qd2 Qe7 22.Rxh6! Nxh6 *(*or *22...Kxh6 23.Bxg5+! Qxg5 24.Rh1+ Kg7 25.Qxg5)* 23.Bxg5]

21.Qd2 Ng8 22.Rxh6! Nxh6

[22...Kxh6 23.Bxg5+! Qxg5 24.Rh1+ echoes a tactical point from the previous note.]

23.Bxg5 Black is losing his lady on f6, and so he soon resigned.

16.c3 Bd6? Back in 2010 I had prepared this move for a game in the 4NCL and was quite happy with my analysis then. Now, looking back I am not sure I am eager to repeat the line! I was aware of the Marshall−Tarrasch game and thought I had found an improvement for Black. It seems back in 1910 Marshall already found the right way to play for White!
